

Providing a trustworthy solution for your filling needs

Business and Industry today is honoured to present to you our Company of the Month Feature, Filling Solutions Ltd. We believe the company deserves this acknowledgement due to its outstanding customer service and the incredible quality of product it provides.

Founded in 2001 by Mr John Clay, Filling Solutions Ltd is located in Hucknall, Nottinghamshire. The company designs and builds bespoke liquid filling and decanting machines to fulfil the requirements of individual customers and clients, covering a wide range of products, environments and processes.

Filling Solutions Ltd has a vast amount of clients including PPG Industries UK Ltd, Synthomer Ltd and Rohm & Haas UK Ltd. The ground-breaking company

has recently introduced an SASH filler range which is a small, relatively inexpensive bench-top filler designed for smaller containers and the IBC Filler for the quick decanting of road tankers into IBC's. They offer a hands-on, quick and friendly response to all enquiries made by customers, with knowledge that has been developed over many years of experience of filling across many industries and trades. Filling Solutions Ltd can often suggest solutions which have not been previously suggested, which often saves a lot of time and money. The best part of all is, this fantastic advice is completely free!

The impressive portfolio of products that Filling Solution has to offer includes the StrongArm range of liquid filling machine, the Single Container Filler, Articulated Arm Tanker filler, and the IBC Filler.

The StrongArm range of liquid filling machines are designed to automatically fill industrial containers ranging from 100ml to 1,500 litres in capacity. Traditional methods of container filling can be costly especially when there are problems such as either overflow, underfill or spillage. The simplicity of the StrongArm offers a space and a cost effective solution to liquid filling. The StrongArm range of machines is also very low maintenance.

The Single Container Filler offers a

filling and decanting industry, and with its high quality products and cutting edge bespoke designs, the company is certain to continue to be a huge success.

cost effective solution for smaller manual batch filling or can be fully automated with conveyors, lid placing, and labelling machines for continuous filling.

The Articulated Arm Tanker filler is specifically designed for filling road tankers. It is can be mounted onto an elevated platform and can be designed to span up to 5 metres.

The IBC Filler offers a quick and effective solution to the off-loading of road tankers on site. The IBC filler gives almost continuous filling into IBC's from deliveries by road tankers. This can be monitored by weight, flow or level. When large storage tanks are a problem or cannot be used, the IBC Filler is the answer.

Filling Solutions Ltd's future plans are to expand into other areas of the
