

handsanitiser

Alcohol “waterless” Hand Sanitisers help kill more germs and improve patient safety.

Hands spread infection and germs, regular use of alcohol based hand sanitiser can help reduce hand bacteria counts by up to 99.99%.

Join the fight against the superbugs

- Superbugs such as MRSA (Methicillin-Resistant Staphylococcus Aureus) have developed immunity to antibiotics and are therefore very difficult to treat.

FACT There are more and more cases of MRSA a year in England and Wales and speculation in the media is that the true figure is substantially higher than is being officially reported.

MRSA was once only associated with unclean hospital wards where hygiene standards were low, but everyday items which are touched thousands of times a day can spread the germs from hand to hand.

■ Available in standard 50ml, 150ml and 250ml bottles

answer by using alcohol hand sanitiser you can help prevent the spread of invisible bacteria, viruses, microbes and superbugs and avoid cross contamination.

FACT The normal method of washing hands with soap is now recognised as insufficient as hands can become re-contaminated from taps and sinks, dryers or towels.

alcohol hand sanitiser

- Keep them in the home, office, car or your handbag
- Easy to use anywhere, any time, to ensure your health and well-being

alcohol hand sanitiser allow YOU to be hands on

handsanitisers

Invisible bacteria, viruses and microbes are passed by unclean hands not in the air. The common cold virus, influenza, and superbugs such as MRSA are passed this way.

JUST THINK... How many of us eat something after handling money or filling up at a petrol station. How many of us are reluctant to use public lavatories.

handsanitisers

Help your customers promote the fight against the invisible superbugs with the use of these clip-on hand sanitisers

Now with the 50ml clip-on bottle fight infection anytime, any place any where.

Available in a range of bright attractive colours

ideal for the medical profession, food industry, children's nurseries, schools, nursing homes and many more, where health and hygiene is the priority.

The use of Alcohol based Hand Sanitisers is being promoted in the health care industry as they are better than hand washing with soap as alcohol kills rather than removes micro-organisms.

The Alcohol 'waterless' Hand Sanitisers can also be used for many other everyday uses such as:

- When eating out or snacking and picnicking
- Travelling when water may not be available
- Around the home and garden
- In the car ■ At work

Complies with British Standard EN1500 The minimum safety requirement for anti-bacterial hand sanitisers.
