

This machine dramatically speeds up eyeletting compared to manual methods, so much so that for example you can easily eyelet an entire banner while an operator using a manual machine would still be fitting the first eyelet.

Designed for high volume constant use, this fully automatic eyeletting machine feeds both the eyelet and backing washer to the setting dies via hopper fed raceways. Then in a single action punches out a hole in the material while simultaneously setting the eyelet without the operator having to handle the components.

Depending on your requirements the PMJ279 is available as either a fixed, bench mounted workstation, or as a mobile unit that can be moved around the work place.

- Quiet operation.
- Sets eyelets in a variety of materials such as vinyl, plastic, paper and leather.
- Laser pointer can be added for accurate placement of work.
- Foot pedal operation leaves both hands free.
- Large capacity component bowls.
- A video demonstration of this machine can be viewed on our website.

| TECHNICAL DATA                       | PMJ279                | PMJ279M |
