## Access Control

We have the specialist skills, experience, knowledge and resources to design, install and maintain access control systems that can meet the exact requirements of all size businesses. Our expertise covers not only the access system and card readers but also barrier systems and turnstiles.

We work with our customers to develop control systems that keep your organisation secure and significantly minimize the risk of theft or trespassing on your property. Our access control systems can provide you with full control over who is entering and leaving your buildings and also provide control of the safety and movement of people on your premises.

Using cutting edge technology and bespoke design and install solutions, we can assist you in developing security systems which improve business efficiency by providing information such as time and attendance reports that can be linked directly to payroll systems.

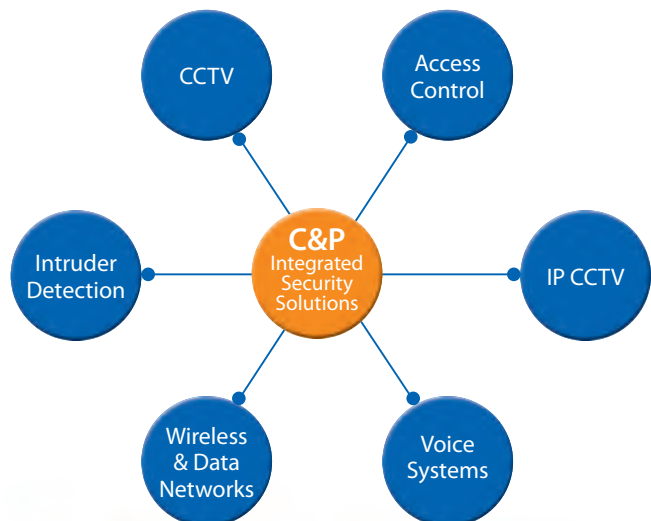

### Our Access Control Services include:

- Access systems
- Barrier systems
- Design and consultancy
- Industrial and commercial turnstiles and barriers
- Installation services
- Prestige turnstiles and barriers
- Preventative and planned maintenance
- Project management
- Site surveys
- Hazardous Areas

### Integration

Although many of our installations are standalone, we pride ourselves on being able to offer solutions that seamlessly integrate many of our product areas. For example, access control systems and intruder systems that integrate with CCTV systems with common management platforms.

*"Specialist Access Solutions to secure your premises."*
