

BOOST LABCARE

Over 20 years expertise in laboratory care

Supply • Installation • Calibration • Maintenance

UKAS accredited laboratory

Preparation of Agar
Biotool Proficlave Preparator

Plate Pouring
Biotool PS20 Plate Pourer

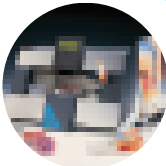

Sample Preparation
IUL Masticator

Dilution of Sample
IUL Smart Diluter

Specialised Dilution
IUL Eddyjet

Auto Plate Reading
IUL Flash & Go

Safe Discard of Plate
Rodwell Autoclaves

Why Boost Labcare?

- We understand the process
- We know the right equipment
- We give informed advice
- We offer specialised training
- We provide tailored maintenance
- We are UKAS accredited
- We promise competitive prices

EVERY STEP OF THE WAY

FOOD MICROBIOLOGY

BOOST LABCARE

Product Information

Biotool Proficlave Media Preparator

Easily and quickly prepares up to 9 litres of plain or complex agar formulations. Equipped with intuitive intelligent software, via a convenient touch screen. Enhanced user programming capabilities (3 x 20 programs). Accurately maintains the agar temperature for hours, in any stage of the single or double cycle process.

Biotool PS20 Plate Pourer

Ideal for production of small, special-purpose agar batches, the unit will fit sets of 20 dishes loaded in the PetriRack. No need for manual stacking or other manual operations. New rack - new batch. The dishes are safely stacked in the PetriRack and can be transported, chilled or incubated in the rack. The rack can be fully autoclaved and the dishes can also be taken continuously from the rack.

IUL Masticator

A 20 years tested instrument to perform aseptic and simple homogenisation. Compact design uses the smallest top bench space. Various models available - enquire for details. The IUL range of masticators are the most reliable range on the market. We also supply sterile plastic bags.

IUL Smart Diluter

Performs precise dilutions based on the control of the weight in just a few seconds. Makes dilutions in a sterile polyethylene bag, saving an enormous amount of work. Dispenses accurate liquid weights. All the parts are autoclavable. Removal and reinstalling the dispense tube of the peristaltic pump takes only few seconds. Control of 6 pumps and link 2 Smart Diluters at the same time to reduce operation and time.

IUL Eddyjet

Carries out spiral inoculation with a unique, high accuracy micro-syringe to avoid cross-contamination. Each sample remains inside the disposable micro-syringe during the whole process. Contains all the spiral plate programs used in the past. Spiral spreading can be checked at any time, using a laboratory balance. By far the best spiral plater on the market.

IUL Flash & Go

Use in conjunction with Windows Vista or XP to obtain a powerful automatic colony counter. It can be used for an unlimited number of new applications besides basic colony count. Count all kinds of colonies in different media types. Comes with a high definition colour camera which detects colonies of approx. 1/450 inches. The illumination device means that the transparent agar are easily processed.

Rodwell Autoclaves

We are registered distributors and service agents for Rodwell and can source an autoclave tailored exactly to your needs. We can supply, install, validate and service your autoclave as well as provide full training. UKAS calibration is also available. Visit our website or request our Autoclave Brochure for the full product range and specifications.
