How did you hear of us?

Are you protected?

A mains power loss lasting less time than the blink of a human eye is enough to erase all of the data on your computer or servers Random Access Memory (RAM).

Unfortunately, fluctuations in the mains power supply expose your IT equipment to the possible dangers of computer processing errors, software crashes, keyboard lockups and fileserver malfunctions. They can even permanently damage your IT & Telecoms hardware.

Your business infrastructure is constantly at risk from spikes, surges and electrical noise. These effects are produced by interference from other electrical equipment such as photocopiers, lifts and fluorescent lights. Adverse weather conditions such as thunderstorms and flooding can also be a factor. You simply cannot prevent these problems from occurring.

Would your business continue to operate effectively if your telephone or computer network system was down due to a mains power failure?

If employees were unable to answer telephones or e-mails to process orders or customer queries, what would the impact be on your business? Downtime can run into thousands of pounds per hour. Loss of credibility is immeasurable.

Adept Power Solutions can help you!

Installing a UPS (Uninterruptible Power Supply) can protect you from these hazards, ensuring your business operation continues to function during a mains failure. For business critical systems installing a Diesel Generator will give you hours and potentially days of protection.

“*Energy is essential and we face a long term challenge to ensure secure, clean and affordable energy....*”

BERR – Energy White Paper 2007

Some of the services we provide are listed below; if you have any queries or require advice of any kind please give us a call on **01264 351415**.

Free Site Surveys

A highly trained engineer will attend your business site to advise and discuss your power protection requirements. This survey is **FREE** and there is no obligation to buy.

Power Protection Solutions

As an independent UPS and Generator supplier we can ensure you receive the right solution for the right application. We're able to install, commission & maintain your solution to the highest standard.

Maintenance Cover

If a UPS or Generator already exists within your infrastructure have you considered when they were last tested? For peace of mind please ask us about our competitive Maintenance programmes. We want you to be confident that your UPS will work as and when required.

Network Integration

Software can be supplied to automatically close down your computer operating system during a mains failure to prevent file corruption. It can also be configured for e-mail, network messaging, SMS or SNMP monitoring.
