QA3
Variable Height Patient Trolley

Manufactured to the highest standard of workmanship

Superior Performance
The QA3 Variable Height Patient Trolley series has been designed for patient transport in the theatre and casualty areas with the versatility to be used for examinations, intubations and radiography. Designed following comprehensive research into patient trolley function and ergonomics, using the latest materials and manufacturing methods, the QA3 Series is a super lightweight yet rigidly constructed patient trolley for the 21st century.

### Vertically Operated Cotsides

### K8 Pressure Care Mattress
Manufactured from body moulded foam and through its sensitivity to temperature, this gel feel foam actually moulds to the shape of the patient’s body, thus relieving pressure by distributing the load as evenly as possible. Developed with the flexible stretch properties of Lycra® this outer material is anti micro bacterial water-resistant, vapour permeable and latex free.

### Cleaning
The quality materials and construction ensure that the trolley maintains its good appearance throughout its working life.

### Maximum Ease of Manoeuvrability
Weight reduction combined with polyurethane tyred castors and an advanced steering system employing a unique centrally pivoted fifth wheel makes this piece of equipment a highly manoeuvrable trolley, easily guided by one person.

### Advanced Braking
This exceptional stable platform includes a single bar advanced braking system that allows all four castors to be braked simultaneously from either side of the trolley.

### A & E Trolley
A specially designed version of the QA3 for Accident & Emergency departments is available. This will include an X-ray translucent platform, a medirail and the K8 pressure care mattress. Optional features include a Monitor shelf and a Venturi Suction System.

### Gas Assisted Backlift
Unique design precision controlled easy lift system enhances both user and patient comfort.

### Hydraulic Tilt Mechanism
Provides an extremely smooth and controlled Trendelenberg facility.

### Fixed Transfusion Pole
Telescopic height adjustable transfusion pole which folds neatly away.

### Hydraulic Lift Mechanism
Operated by pedals on either side of the trolley.

### Super Lightweight Yet Rigid Moulded Construction
Giving durable wear resistant finish.
