

daptaPort *Bluetooth*

bluetooth adapter system

Bluetooth to Ethernet networking access point for Bluetooth enabled devices and handhelds.

Secure network access for up to five full time connections

Bringing Enterprise Forward

Every day more enterprises trust primarily wireless handheld devices such as smart phones and tablets to gather and transmit critical business data.

With friendly UI's and attractive price points, these historically consumer-targeted devices are changing the way businesses operate. One significant resulting IT challenge is providing secure, stable network connections for these devices. WIFI is simply not always available or the preferred option in some environments. This is where the newest addition to Portsmith's **daptaPort** series of enterprise adapters can help.
