NEW - THE 1m WIDE AWNING SYSTEM THAT KEEPS THE CUSTOMERS DRY!

instant
marquees

1m AWNING DETAILS

Pop-up market stalls have many advantages over the old-fashioned traditional stalls, but until now, the customers have had to shop in the rain!

Instant Marquees were asked by Charnwood Council to produce a 4x3m stall to suit the market configuration in their 2014 market refurbishment.

Our solution was to build a 1m overhanging awning system into the canopy, rather than adding it on later, and support it by 2 strong arms that clamp quickly and easily on the stall legs and a 3m cross tube. The result is a superbly taught and strong awning that is more than up to the rigours of market use.

The stall holders love them because they offer better weather protection for their goods, and the customers love them because they can shop in the dry.

We believe they are the future in pop up market stalls!

WHY INSTANT MARQUEES?

Experience: we have over 10 years experience of producing market stalls, and we have helped more than 20 Councils upgrade their markets across the UK. More than 2000 of our pop-up stalls are currently in market use.

Quality: all our stalls are produced in our factory in the UK using EEC sourced materials wherever possible. They have a well-earned reputation for durability & strength. Council references available

Quality of Service: we can help with the design & layout of your market in order to minimise capital expenditure. We offer staff training, next day delivery of parts, annual servicing contracts etc

WHICH MARKETS HAVE BEEN SUPPLIED BY INSTANT MARQUEES LTD?

Council Markets: Ballymeena, Bradford MDC, Bedworth, Bromsgrove, Bude, Bury, Camden, Charwood/Loughborough, Cheshire East, Coleraine, Derry, Dungannon, Harlow, Launceston, Leicester, Lurgan, Nuneaton, Oldham, Portsmouth, Romford, Stockport, South Molton, Tavistock, Watford

Other Markets: Kidderminster, Stratford on Avon, Tamworth, Wolverhampton, Worcester

FAQ

What sizes are available? 2x2m, 3x2m, 4x2m, 3x3m, 4.5x3m 4x4m, 6x3m. Custom sizes if required.

Can they be used in rows? Using clamps and gutters the stalls can be used in rows and/or back to back if required

How long do they take to erect? Less than 60 seconds for the frame & canopy

How are they kept stable in winds? There are 3 systems for stabilising the stalls. 1) Anchor Bolts: the safest system with stainless ground inserts that attach to the stall feet. 2) Jigsaw Weights: 30kgs weights which sit on the footplates. 3) Ratchet Strap Guying set: strong and stable but require anchor points

What are the canopies made from? For market stalls we recommend PVC, which is more durable, damage resistant and easier to clean than polyester. It is welded, not stitched, which means we can guarantee the canopies are 100% waterproof.

How much does a stall weigh? At Instant Marquees we have worked hard to keep the weight down whilst keeping the strength & reliability up. 3x3 with canopy: 35kgs

Can I try before I buy? If you wish to check the suitability of our stalls before making a commitment, why not hire one or however many you need for a day, a week or even a month?

Can the canopies and walls be printed? You can have the pelmet, canopy or walls partially or fully digitally printed to pantone. We print everything in house and will design the layout for you FOC.

INSTANT MARQUEES BAR TENT

The new Bar Tent is an ideal retail unit for bars and food stalls, or even as a stand-alone shop. The canopy is 4.5 x 4.5m, which means customers are offered weather protection while being served. There are 3 full length counters 400mm wide which fold in half for transport; the counters are quick & easy to fit, easy to wipe clean, and are strong enough to support 100kgs each, evenly distributed. The frame and canopy can be erected in just over 1 minute, the half height walls are fastened to a keder strip on the counter which means they remain taught whatever the wind conditions. The Bar Tent can be weighted on hard surfaces or pegged through the feet on soft. New, different, functional, attractive - what's not to like?

TECHNICAL SPECIFICATIONS

Upper leg	42x42x1.6mm Aluminium	Upper leg cap	Profiled Rubber	PVC Fire Cert	BS 7837/ M2

INSTANT MARQUEES MARKET STALLS - UNIQUE FEATURES & BENEFITS

FEATURES UNIQUE TO INSTANT MARQUEES	BENEFIT
Profiled Rubber Caps on Upper legs Photo 1	Protects canopy in highest area of stress
NEW! Market Oval Section Scissor Tube, 40 x 20 x 1.7mm Photo 2	The strength of a pop up comes from the section of the scissor - ours is the largest in the industry. The oval section is much kinder to the canopy than rectangular when folded. And from 2014 all stalls have scissor tube with 60% greater wall thickness which means the stalls will last even longer.
Profiled Rubber Cap on King Post Photo 3	Unbreakable - it will never shatter, unlike plastic caps, when you push the ring post down when de-rigging. Once a plastic cap breaks the tube tends to make a hole in the canopy. The failure of one cheap part can lead to a very expensive repair - this will never happen with an INstant Marquees Market Stall
Neoprene Jackets on all Scissor frame joints Photo 2	The fitted neoprene jackets prevent the canopy coming in to contact with the steel brackets when the stall is folded, avoided possible scuffing and damage to the canopy
Male/female bolt system Photo 3	Instant Marquees unique bolt system means that no thread ever protrudes in to an area where it is likely to damage the canopy in any way
Market Footplate with optional keyhole cut out for Safety-loc Ground Anchor system Photo 5	The market footplate has proven to be a must-have option for market stalls - it should last the life of the stall. With the Safety-loc cut-out it can be used to secure the stalls directly to the ground where ground anchors are fitted
Welded PVC canopies - 450/500gsm with UK Fire Certificate Photo 4	Instant Marquees pioneered welded PVC canopies way back in 2004, and is still the only company that supplies PVC canopies with welded main seams - which means that they can be guaranteed to be 100% water-proof. PVC enjoys further benefits of being more durable & damage resistant and far easier to clean than polyester. For late 2012 on, we have found a new supply of PVC that is shiney on both sides, making cleaning even easier, and it is more supple than before, making the canopies easy to fold when de-rigging. It is also has an anti-mould treatment as standard
New mid-height quick-fit base bar system	New for 2013, a base bar that takes just seconds to fit. It prevents walls from flapping when it's windy, and can improve stability when weighted on hard ground by up to 60%
12mm Button Pin	Simple, durable & ultra-reliable. In production for over 10 years, and we have hardly ever had to send out one as a spare part
Rigging Tool System	Takes all the effort out of rigging up the stalls. Ideal for single operator rigging
Made in the UK	Which means we can make custom sizes, special walls and parts to the specification that is best for your market needs
