Supine Head Support

The latest innovative design from  Trulife - launched following comprehensive research into supine head support pressure relieving properties - the  supine head support.

- 100% Silicone construction
- No PU film outer layer
- Robust construction
- Natural adhesive properties
- Hygienic

The  supine head support has been designed truly with the patient in mind - it's anatomical design offers enhanced positioning, comfort, support and redistribution of pressure by supporting both the neck and the head. The occipital void provides excellent air circulation - enhancing breathability for the occiput whilst ensuring there is no build up of perperation.

The supports unique natural adhesive properties ensure that both the device retains it's intended position on the operating platform, and the patient's head is retained in the required position throughout the procedure.

The 100% Silicone construction - without the need for a PU film outer layer - is hypoallergenic, robust - it will not split, delaminate or disintegrate - and can be very easily cleaned, disinfected and can also be autoclaved (to a limited number of cycles).

For more information on this device, or to arrange an on-site demonstration, please contact your Regional Account Manager or contact us via:-
