

Server Call V3 System

Transform your kitchen to front of house communication with Server Call V3

The Server Call V3 waiter paging system provides instant communication between the kitchen and your wait staff at the press of a button.

No more shouting for service, a single button press calls the wait staff via a discrete staff pager with a simple vibration that can easily be felt but remains invisible to diners.

The new robust IP65 rated V3 staff pagers offer protection against water & dust ingress prolonging the life of pagers.

V3 Staff Pagers feature a strong polycarbonate belt clip, wrap around rubber bumper. The V3 staff pager is slimline with a strong vibration ensuring staff are always aware of alerts.

Server Call V3 has user options for automatic recall alerting staff up to three times with the option to automatically call a manager if the calls are unanswered. Alternatively the system can be set via user settings for simple one press one call.

A page all button allows all staff to be called simultaneously back to the kitchen when required to give messages such as the special has finished.

With a Server Call V3 system your staff will spend more time with diners but always know when order is ready for service.
