

Ultra Trac (RFID) TABLE LOCATION

AND PAGER ALL IN ONE

The Ultra Trac (RFID) from BTG is a wireless customer locator, which allows customers to be found easily by food runners, ensuring orders are delivered on time to exactly the right table.

INCREASE PRODUCTIVITY

INCREASE EFFICIENCY

If you're delivering food to your customers in a busy venue, don't rely on numbers on sticks, give them an Ultra Trac Pager with the unique Tap & Find feature. Check the table plan and your staff will find them in no time. Hot Food, delivered promptly.

HOW IT WORKS

1

2

3

Give the Ultra Trac RFID pager to customers when ordering.

Customers tap the pager on the table number and the pager sends back the table location to the host.

Tags can even be located under the table. Waiter delivers the food to the guest's location.

4 (Show All Mode)

If the customer goes to an area without table tags, then you simply touch the screen and page them to return to collect their food.

5 (Automatic Mode)

The orders on the screen have a timer display so that you know how long customers have been waiting. The order will even change colour to amber and red, depending on the wait time.
