

Alucobond Fabrication

10 Fetter Lane

NES were entrusted with the manufacture and installation of the impressive entranceway to the extensively refurbished 10 Fetter Lane.

Over 90 intricately engineered panels were required to clad the canopy, entrance pillars and wall returns; all manufactured from a stylish silver Alucobond. The fabrication of the front panels were particularly difficult due to the tight fold required; these panels had to be routed three times to achieve the desired angle.

The completed development has provided high quality office accommodation with NES providing the finishing touch of class.
