

Asgard Engineering

Asgard Engineering was formed on 17th April 2000 by current Managing Director, Ian Hampton.

The driving focus of the company has been to concentrate on high quality, technical excellence in CNC Precision machined components.

Quality Policy: "We will deliver our products and services, on time, to agreed customer requirements and price. Continuously seeking to improve our service performance enhances our reputation with our customers and Customer Satisfaction. Customer focus and the adherence to our manual and procedures are mandatory"

In support of this focus, we use modern, up to date CNC machines, and operate Quality Systems in accordance with Best Practice and ISO 9001.

Since we started we have added brand new machines every year - and right now we're awaiting delivery of a new SR32 sliding head from Star as we continue to add to our capacity and capabilities.

Our inspection equipment includes Laser Micrometer measuring to 0.15 microns, and CNC Vision system for automated and repeatable parts measuring. We offer SPC controls on critical features and the engineering and process development and validation behind the manufacturing includes FMEA studies, both our own and in collaboration with customers.

We monitor our on-time performance and use computerised shop loading to generate accurate delivery promises, recognising the importance of delivery targets to customer satisfaction.
