

Stainless Steel Tubular Products

The information contained herein is based on our present knowledge and experience and is given in good faith. However, no liability will be accepted by the Company in respect of any action taken by any third party in reliance thereon.

As the products detailed herein may be used for a wide variety of purposes and as the Company has no control over their use, the Company specifically excludes all conditions or warranties expressed or implied by statute or otherwise as to dimensions, properties and/or their fitness for any particular purpose. Any advice given by the Company to any third party is given for that party's assistance only and without any liability on the part of the Company.

Any contract between the Company and a customer will be subject to the Company's Conditions of Sale. The extent of the Company's liabilities to any customer is clearly set out in those Conditions; a copy of which is available on request.

Weights

All weights shown in this publication are for guidance only. They are calculated using nominal dimensions and scientifically recognised densities. Please note that in practice, the actual weight can vary significantly from the theoretical weight due to variations in manufacturing tolerances and compositions.

The Company

United Alloys is a specialist stockholder, processor and distributor of stainless steel, with a particular focus on tubular products. The Company has developed wide-ranging and in-depth expertise in sourcing, processing and logistics to provide customers with complete supply-chain solutions.

The experienced and well-trained team at United Alloys offer customers technical support at all stages of a project from initial design onwards and are ready to assist with any enquiry – providing solutions, no matter how large or small the order, and no matter how complex the requirements. The company has a long track record of assisting customers, many of them blue-chip household names, in achieving lean and cost-effective manufacturing.

Since becoming part of the Amari Group, United Alloys has also been able to offer its customers access to the UK's largest and most comprehensive stock of stainless steel spanning all semi-finished product forms as well as a complete range of aluminium, copper, brass and bronze.

The standard stainless steel product range spans:

- ◆ Rolled products - sheet, plate, coil, strip
- ◆ Bar – round, square, flat, hexagon
- ◆ Pipe and Tube including automotive exhaust tube
- ◆ Fittings and Flanges

Specialist stainless steel products include:

- ◆ Handrail Tube and Fittings, including Slotted Tube and fittings
- ◆ Flexible Hoses
- ◆ Fasteners
- ◆ High purity

Bespoke products in stainless steel include:

- ◆ Tube Coils
- ◆ Coil Radiators
- ◆ Dished Ends
- ◆ Plus a wide range of other machined/formed/fabricated components to customers' drawings

Processing Services:

At our Walsall facility we offer a wide range of tube processing to provide customers with semi-finished parts or finished components. In addition, a network of selected and approved sub-contractors is used to provide further manufacturing solutions.

Processes offered include:

- ◆ Cutting to length
- ◆ Perforating
- ◆ Bending
- ◆ Polishing
- ◆ Machining
- ◆ Threading
- ◆ Tube manipulation, shaping and coiling
- ◆ Pre-Fabrication and welding

Sourcing and Logistics Services

- ◆ Global sourcing of semi-finished products through to finished components
- ◆ 'Kitting' - Supply of kits comprising all the parts needed for a particular product or sub-assembly
- ◆ 'JIT' delivery systems

ASTM Pipe

Introduction

The term pipe covers a specific range of sizes laid down by ANSI specifications. Any sizes not covered by these specifications are tube. Stainless Steel Pipe dimensions determined by ASME B36.19 covering the outside diameter and the Schedule wall thickness. Note that stainless wall thicknesses to ANSI B36.19 all have an 'S' suffix. Sizes without an 'S' suffix are to ANSI B36.10 which is intended for carbon steel pipes.

Seamless and Welded

ASTM A312: Seamless and straight-seam welded austenitic pipe intended for high temperature and general corrosive service. Filler metal not permitted during welding.

ASTM A358: Electric fusion welded austenitic pipe for corrosive and/or high temperature service. Typically only pipe up to 8 inch is produced to this specification. Addition of filler metal is permitted during welding.

ASTM A790: Seamless and straight-seam welded ferritic/austenitic (duplex) pipe intended for general corrosive service, with a particular emphasis on resistance to stress corrosion cracking.

ASTM A409: Straight-seam or spiral-seam electric fusion welded large diameter austenitic light-wall pipe in sizes 14" to 30" with walls Sch 5S and Sch 10S for corrosive and/or high temperature service.

ASTM A376: Seamless austenitic pipe for high temperature applications.

ASTM A813: Single-seam, single- or double- welded austenitic pipe for high temperature and general corrosive applications.

ASTM A814: Cold-worked welded austenitic pipe for high temperature and general corrosive service.

Note: Welded pipes manufactured to ASTM A312, A790 and A813 must be produced by an automatic process with NO addition of filler metal during the welding operation.

Welded pipe specifications

Usually it will be to ASTM A312. If it is to ASTM A358 then there are various Classes available as shown below. The Class Number dictates how the pipe is welded and what non-destructive tests:

- **Class 1:** Pipe shall be double welded by processes employing filler metal in all passes and shall be completely radiographed.
- **Class 2:** Pipe shall be double welded by processes employing filler metal in all passes. No-radiography is required.
- **Class 3:** Pipe shall be welded in one pass by processes employing filler metal and shall be completely radiographed.
- **Class 4:** Same as Class 3 except that the welding process exposed to the inside pipe surface may be made without the addition of filler metal.
- **Class 5:** Pipe shall be double welded by processes employing filler metal in all passes and shall be spot radiographed.

Markings on pipe

The full identification of the pipe should be continuously marked down its whole length, including:

- Nominal Pipe Size (Nominal Bore)
- Schedule (Wall Thickness)
- Specification
- Grade
- Method of Manufacture (Seamless or Welded)
- Heat Number
- Manufacturer's Name or Symbol

Notes

- 1 Schedules 5S and 10S wall thicknesses do not permit threading in accordance with ANSI/ASME B1.20.1.
- 2 These dimensions and weights do not conform to ANSI/ASME B36.10M.
 - The suffix 'S' after the schedule number indicates that the pipe dimensions and weight are in compliance with this stainless steel pipe specification, ANSI/ASME B36.19M-1985, and not the more general ANSI/ASME B36.10M-1995 specification.
 - Although this specification is applicable to stainless steel, quoted weights are for carbon steel pipe and should be multiplied by 1.014 for austenitic and duplex steels, or by 0.985 for ferritic and martensitic steels.

>34 to 48	0.031	0.8	0.187	4.8	12.5	22.5	5	10

Notes

1 Includes ovality tolerance except for thin wall pipe (i.e. $t > 3\%$ OD).

2 Min wall thickness = Nominal wall thickness (t) x 0.875. Not applicable if filler metal added.

3 Refer to pages 1-2 to 1-5 for standard pipe weights. For non standard pipes $W(\text{lb/ft}) = 10.68(\text{OD}-t)t$, or $W(\text{kg/m}) = 0.02466(\text{OD}-t)t$

• **Standard Cut Lengths** Pipe ordering alternatives are:

- **Random.** Standard lengths are in the range 15 to 24 feet. Shorter lengths as agreed with the purchaser.
- **Specified Lengths.** Cut lengths as specified, with end finish also specified.

• **Length tolerances.** No pipe shall be shorter than specified. No pipe shall be more than 1/4 in (6mm) longer than specified. Tighter tolerances may be specified, e.g. for bevelled pipe.

• **Straightness.** All finished pipe shall be reasonably straight. For metal-arc welded pipe maximum deviation from straight = 1/8 in (3.2mm) in 10 ft (3 m).

Seamless and welded austenitic stainless steel pipes

This specification covers austenitic steel pipe intended for high temperature and general corrosive service. H grades in the chemical composition table are specifically for high temperature service.

Manufacture

- Manufacture.** In order to comply with this specification welded pipe must be manufactured by an automatic welding process using no filler metal, or it must be a seamless pipe. If a welded pipe has a nominal pipe size greater than 14 then it may be constructed from two longitudinal sections, and hence have two longitudinal welds. The pipe may be either hot finished or cold finished.

Finish and repair

- Finish.** The surface of the pipe must be clean and free of scale and contaminating iron particles. It can be bright annealed but may be pickled, blasted or can be passivated.
- Repair by welding.** Permitted on $\leq 20\%$ of the weld seam length of welded pipe if $\geq \text{NPS } 6$ and having a wall thickness ≥ 0.200 in (mm). Tungsten-arc welding process is used for repairs, with filler metal to a grade as specified in A 312 (not repeated here). Weld repairs must be identified on the pipe and in test certificate.

Tensile requirements

Notes

1 Values for wall thickness $> \frac{3}{8}$ in (9.5mm)

ASTM Pipe

Pipe Specifications - ASTM A358/A358M

Electric-fusion-welded austenitic chromium-nickel alloy steel pipe for high-temperature service

This specification covers electric-fusion-welded austenitic chromium-nickel alloy steel pipe suitable for high temperature and general corrosive service.

Tolerances

- **Tolerances.** ASTM A530 requirements, apply unless otherwise stated below.
- **Outside Diameter.** $\pm 0.5\%$ of specified OD.
- **Wall Thickness.** Minimum wall thickness shall be ≤ 0.01 in (0.3mm) under nominal thickness.
- **Out-of-Roundness.** Major and minor outside diameters to differ by less than 1%.
- **Alignment.** The gap between the pipe and a 10 ft (3 m) straight edge shall $\leq \frac{1}{8}$ in (3mm)

Finish and repair

- **Appearance.** Finished pipe will have a workmanlike finish.
- **Plate Defect Repair by Grinding.** Defects may be repaired by machining or grinding, provided the wall thickness is not reduced below the minimum.
- **Plate Defect Repair by Welding.** Defects which give unsatisfactory wall thicknesses can be repaired by welding if the purchaser agrees. Repair welds must be suitably NDT examined or lengths pressure tested if repair depth is $> \frac{1}{4}$ wall thickness.
- **Finish.** Pipe will be free of scale and contaminating iron particles. Bright annealed pipe need not be pickled, or blasted. The purchaser may request a passivating treatment.

Tube specifications

ASTM Standards covered in this section	
ASTM Tube – General Requirements	
A450/A450M	General Requirements for Carbon, Ferritic Alloy, and Austenitic Alloy Steel Tubes
A370	Mechanical Testing of Steel Products
A213/A213M	Seamless Ferritic and Austenitic Alloy-Steel Boiler, Superheater and Heat Exchanger and Condenser Tubes
A249/A249M	Welded Austenitic Steel Boiler, Superheater, Heat Exchanger and Condenser Tubes
A268/A268M	Seamless and Welded Ferritic and Martensitic Stainless Steel Tubing for General Service
A269	Seamless and Welded Austenitic Stainless Steel Tubing for General Service
A270	Seamless and Welded Austenitic Stainless Steel Sanitary Tubing
A511	Seamless Stainless Steel Mechanical Tubing
A554	Welded Stainless Steel Mechanical Tubing
A632	Seamless and Welded Austenitic Stainless Steel Tubing (small diameter) for General Service
A778	Welded, Unannealed Austenitic Stainless Steel Tubular Products
A789/A789M	Seamless and Welded Ferritic/Austenitic (Duplex) Stainless Steel Tubing for General Service
A791/A791M	Welded, Unannealed Ferritic Stainless Steel Tubing
A803/A803M	Welded Ferritic Stainless Steel Feedwater Heater Tubes

Markings on the tube

The full identification should be continuously marked down the whole length, including:

- Size – Outside Diameter (O/D) and Wall Thickness
- Specification
- Grade
- Method of Manufacture (Seamless or Welded)
- Heat Number
- Manufacturer's Name or Symbol

Hygienic Tubing

Please see separate section on page 6-1.

Metric ND Tubing

Please see separate section on page 7-1.

Tube size ranges

An extensive size range is available. Non-standard tube sizes may be subject to mill quantity restrictions and extended delivery times.

Below is a guide to the sizes readily available on an ex-stock basis:

- Hypodermic tube from 0.4mm to 5mm O/D with wall thickness 0.05mm to 0.4mm
- Instrumentation tube in straight lengths or continuous coils of up to 1,000 metres long: O/Ds 6mm, 8 mm, 10 mm and 12mm with heavy wall thicknesses, typically 0.5mm, 1mm, 1.5mm or 2mm
- Metric sizes from 6mm O/D to 610mm O/D with wall thickness 1mm to 6mm
- Imperial sizes from 1/8" O/D to 6" O/D with wall thickness from 24swg to 10swg
- Hygienic/Sanitary Tube
 - Imperial sizes to ASTM A270: 1/2", 1", 1 1/2", 2", 2 1/2", 3" & 4" O/D with 16swg wall and 4" O/D with 14swg wall
 - Metric sizes to DIN 11850: 1", 1 1/2", 2", 2 1/2" & 3" O/D with 1.5mm wall and 4" O/D with 2mm wall
- Welded Tubes for the water industry from 18mm O/D x 1.5mm wall to 910mm O/D x 5mm wall
- Welded Tube for automotive exhaust systems, mostly in grade 409 – A limited size range from 35mm to 63 mm O/D with wall thickness 1.2mm to 2mm
- Decorative and structural tubes (welded)
 - Round in metric and imperial O/D sizes from 6mm O/D x 1.0mm wall to 100mm O/D x 3mm wall and 1/8" O/D x 24swg to 4" O/D x 1/4" wall
 - Square in metric and imperial O/D sizes from 12.7 mm O/D x 1.5mm wall to 250mm x 250 x 10mm wall
 - Rectangular in metric sizes from 20mm x 10mm x 1.2mm wall to 300mm x 200mm x 10mm wall
 - Other items include Oval, Handrail and Textured Finish – Most common oval size is 60mm x 33mm x 2.0mm wall
 - Note that most decorative tubes are supplied with a polished finish

ASTM Tube

Tube Sizes - General Purpose Seamless Tube

The following table lists tube sizes commonly manufactured to ASTM A269 or ASTM A511. The tables are based on manufacturer's information.

Imperial dimensions and weights per metre

OD	Wall thickness, in													
	0.020	0.022	0.028	0.035	0.036	0.048	0.064	0.080	0.104	0.125	0.188	0.250	0.375	
in	Weight, kg/m (conventional weights)													
1/8	0.034	0.037	0.044		0.052									
3/16		0.059	0.072		0.088	0.109								
1/4	0.075	0.081	0.101		0.125	0.157	0.193							
5/16			0.129		0.161	0.206	0.258

2 1/4										4.31		8.11		
2 1/2							2.53			4.81		9.12		
2 3/4							2.79							
3							3.05	3.79		5.83		11.1		
3 1/2												13.2		
4										7.85		15.2		
5												19.4		
6												23.5		

Metric dimensions and weights per metre

OD	Wall thickness, mm						
	0.5	1.0	1.5	2.0	2.5	3.0	4.0
mm	Weight, kg/m (conventional weights)						
6	0.069	0.126	0.170				
8		0.176	0.245				
10		0.226	0.321	0.403			
12		0.277	0.369	0.503			
14			0.462	0.604			
15		0.352	0.510	0.654			
16			0.547	0.705			
18			0.623				
20			0.698	0.888		1.28	
22			0.774	1.02			
25			0.887	1.16	1.43	1.66	
28			1.00	1.31			
30				1.41		2.04	
36				1.66			
38						2.64	3.42
40				1.91			
42				2.01			
50				2.42			

Notes

- Conventional weights are quoted in both tables above.
- For austenitic and duplex steels multiply the quoted weight by 1.014.
- For ferritic and martensitic steels multiply the quoted weight by 0.985.

ASTM Tube

Tube Sizes - Heat Exchanger Tube

Chemical and petrochemical pipe and tube

This heading covers a broad spectrum of industries including chemical, petrochemical, offshore, process, power generation, nuclear, mining and mineral/metal processing, pulp and paper.

- For a full list of Standard Wire Gauge (SWG) and Birmingham Wire Gauge (BWG) dimensions please refer to charts on page 8.5 of this databook.

Heat exchanger tube - principal SWG sizes

Outside Diameter		Standard Wire Gauge (SWG)								
		22 (0.711mm)	20 (0.914mm)	18 (1.218mm)	16 (1.625mm)	14 (2.032mm)	12 (2.641mm)	11 (2.946mm)	10 (3.251mm)	
in	mm	Weight, kg/m (average wall ¹)								
1/4	0.250	6.350	-	0.124	0.157	0.192	-	-	-	-

1	1.000	25.400	0.440	0.560	0.738	0.967	1.19	1.51	1.66	1.80
1 1/4	1.250	31.750	0.553	0.706	0.931	1.23	1.51	1.93	2.13	2.32
1 1/2	1.500	38.100	0.666	0.851	1.13	1.48	1.84	2.35	2.59	2.84
1 3/4	1.750	44.450	0.779	0.996	1.32	1.74	2.16	2.77	3.06	3.35
2	2.000	50.800	0.892	1.14	1.51	2.00	2.48	3.19	3.53	3.87
2 1/2	2.500	63.500	-	-	1.90	2.52	3.13	4.03	4.47	4.91
3	3.000	76.200	-	-	2.29	3.03	3.77	4.87	5.40	5.94
3 1/2	3.500	88.900	-	-	2.67	3.55	4.42	5.70	6.34	6.97
4	4.000	101.60	-	-	3.06	4.07	5.07	6.54	7.28	8.01

Notes

- Conventional weights are quoted, assuming the tube is specified as average wall.
Add 10% to the weight for minimum wall tube.
Multiply quoted weights by 1.014 for austenitic and duplex steels, by 0.985 for ferritic and martensitic steels.
- Refer to page 8-5 for a full list of SWG numbers and equivalent wall thicknesses.

Heat exchanger tube - principal BWG sizes

Outside Diameter			Birmingham Wire Gauge (BWG)								
			20 (0.889mm)	18 (1.245mm)	16 (1.651mm)	15 (1.829mm)	14 (2.108mm)	13 (2.413mm)	12 (2.769mm)	11 (3.048mm)	10 (3.403mm)

Tube Sizes - Instrumentation Tubing and Capillary Tubing

Instrumentation and hydraulic control tubing

OD	Wall thickness, mm			
	0.5	1.0	1.5	2.0
mm	Weight, kg/m (conventional weights)			
6	0.069	0.126	0.170	
8		0.176	0.245	
10		0.226	0.321	0.403
12		0.277	0.369	0.503
14			0.462	0.604
15		0.352	0.510	0.654

Notes

- Conventional weights are quoted in the table above.
- For austenitic stainless steels multiply the quoted weight by 1.014.
- For ferritic and martensitic steels multiply the quoted weight by 0.985.

Capillary or hypodermic tubing - typical sizes

Outside Diameter		Wall thickness
in	mm	mm
1/32	0.79	0.20
0.040	1.02	0.20
0.049	1.25	0.20
0.050	1.27	0.20
1/16	1.63	0.15 / 0.20 / 0.25 / 0.30 / 0.40 / 0.51 / 0.56
0.072	1.83	0.23
0.083	2.11	0.25
3/32	2.38	0.15 / 0.20 / 0.30 / 0.40 / 0.51 / 0.91
0.118	3.00	0.30 / 0.50 / 0.70 / 0.90
1/8	3.18	0.20 / 0.25 / 0.51 / 0.81 / 0.91 / 1.22
0.138	3.51	0.40
5/32	3.97	0.25 / 0.40 / 0.56 / 0.71 / 0.91
0.157	4.00	0.70 / 0.90 / 1.00
0.177	4.50	0.50
3/16	4.76	0.13 / 0.20 / 0.25 / 0.40 / 0.46 / 0.51 / 0.56 / 0.71 / 0.81 / 0.91 / 1.22 / 1.63
0.197	5.00	0.50 / 0.75 / 1.00 / 1.50

Notes

- When this tubing is used with compression fittings there is a maximum hardness requirement.

ASTM Tube

Tube Sizes - Structural and Decorative Tubing

Significant quantities of stainless steel tubing are used for structural and decorative (ornamental) applications. Most of the tubing used in these applications is HF welded, although some TIG welded is also used.

Structural tubing may be specified to ASTM A554, Welded Stainless Steel Mechanical Tubing.

Square structural and decorative tube - typical sizes

Square size: Outside Dimensions		Wall thickness, mm									
		1.0	1.2	1.5	2.0	3.0	4.0	5.0	6.0	8.0	10.0
mm	in	Weight, kg/m (austenitic stainless steel)									
10.00		0.34									
12.70	1/2	0.37	0.44	0.55							
15.00			0.53	0.65							
20.00		0.60	0.71	0.88	1.19						
22.00			0.79								
25.00			0.92	1.14	1.49	2.20					
25.40	1		0.97	1.10							
30.00			1.10	1.37	1.84	2.72					
32.00	1 1/4		1.20	1.47							
35.00				1.62	2.15						
38.00	1 1/2		1.37	1.75	2.31	3.51					
40.00			1.49	1.85	2.45	3.75	4.80				
50.00				2.32	3.08	4.65	5.96	7.41			
60.00				2.80	3.71	5.49	7.22	8.90			
70.00					4.38	6.53	8.45	10.6			
80.00					4.98	7.53	9.81	12.3			
100.00	4				6.40	9.53	12.4	15.3	17.5	21.6	
120.00						11.8	14.7	18.0			36.0
150.00						14.0	18.6	23.0	31.2	34.3	41.7
200.00						19.1	24.8	30.8	35.0	47.3	57.6
250.00								37.1		59.9	73.5

Notes

- This table is based on manufacturer's data.
- For ferritic and martensitic steel multiply the quoted austenitic steel weight by 0.97.

Tube Sizes - Structural and Decorative Tubing

Rectangular structural and decorative tube - typical sizes

Size: Outside Dimensions	Wall thickness, mm									
	1.0	1.2	1.5	2.0	3.0	4.0	5.0	6.0	8.0	10.0

Notes

1 Includes ovality tolerance except for thin wall tube.

2 t_{min} = minimum wall thickness.

- Standard Cut Lengths.** Alternatives are: Random As agreed with the purchaser.
 Specified Cut lengths as specified, with end finish specified also.
 - Length tolerances.** No tube shall be shorter than specified. Over length tolerances of tubes (before bending) are as follows: Seamless, hot finished tube: All sizes: 3/16 in (5mm) max.
 Seamless, cold finished and welded tube: <2 in (50.8mm) OD: 1/8 in (3mm) max.
 ≥2 in (50.8mm) OD: 3/16 in (5mm) max.
- These apply to lengths <24 ft (7.3 m) and are increased by 1/8 in (3mm) for each additional 10 ft (3 m).

ASTM Tube

Tube Specifications - ASTM A213/A213M

Seamless ferritic and austenitic alloy-steel boiler, superheater and heat exchanger tubes

This specification covers minimum wall thickness seamless ferritic and austenitic steel, boiler and superheater tubes and austenitic steel heat exchanger tubes.

Finish

- **Finish.** Austenitic grades are pickled free of scale. Bright annealed tube need not be pickled. Ferritic cold drawn tubes shall be free of scale, but slight oxidation is allowed. Ferritic hot formed tubes shall be free of loose scale.

Notes

- 1 Elongation for wall thickness $t = \frac{5}{16}$ in (8mm); For wall thickness $t < \frac{5}{16}$ in (8mm): Elongation % = $32t + 10.00$ (= $1.25t + 10.00$) for 18Cr-2Mo. Calculated elongation values should be rounded to the nearest whole number.
- 2 Values if wall thickness $t > 0.25$ in
- 3 No Vickers hardness provided.

Welded austenitic steel boiler, superheater, heat exchanger and condenser tubes

This specification covers nominal wall thickness austenitic steel welded tubes for use as boiler, superheater, heat exchanger, condenser, or hygienic tubes. Minimum wall thickness tube may be also specified.

Notes

1 Values if wall thickness $t > 0.25$ in

2 Values if wall thickness $t > 0.187$ in

- Refer to mandatory testing exceptions also.

ASTM Tube

Tube Specifications - ASTM A269

Seamless and welded austenitic stainless steel tubing for general service

This specification covers nominal wall thickness austenitic stainless steel tubing for general corrosion resisting and low or high temperature service.

Tolerances

- ♦ **Cut Length.** No tube may be shorter than specified. For tube <1½ in (38.1mm) cut length may be up to ⅛ in (3 mm) longer than specified. For tube ≥1½ in (38.1mm) cut length may be up to ⅜ in (4.8mm) longer than specified. These tolerances are increased by ⅛ in (3mm) for every 10 ft (3 m) over 24 ft (7.3 m), up to a maximum tolerance of ½ in (13mm).

Cross-sectional tolerances

Outside Diameter (OD)		Wall Thickness (t)		Variations in OD				Variation in t	
in	mm	in	mm	Under		Over		Under	Over
				in	mm	in	mm	%	%

Notes

1 Thin walled tubes. Therefore ovality tolerance increases, but mean OD at a cross section must be within permissible variation.

Finish

- ♦ **Finish.** Tubes to be pickled, free of scale. Where bright annealed, pickling is not necessary.

Butt Weld Fittings are a family of fittings used for forming circumferential butt weld joints in pipework systems.

They are used only in conjunction with ANSI Pipe and are available in the same size range. They are used in areas where pipe-work is permanent and are designed to provide good flow characteristics.

Manufacture

- **Materials.** Refer to chemical composition table ASTM A240 on page 1-6. Fittings may be made from forgings, bars, plates, or seamless or welded tubular products, provided the materials conform to the chemical composition table.
- **The steel** may be melted by electric-furnace, or vacuum-furnace, or by either of these followed by vacuum or electroslag-consumable remelting.
- **Forming.** Fittings may be formed by hammering, pressing, piercing, extruding, upsetting, rolling, bending, fusion welding, machining or any combination of these processes.
- **Heat Treatment.** All fittings are heat treated in accordance with the heat treatment table. All welding must be done prior to heat treatment.

Manufacturing standards

Wrought pipe fittings are manufactured to dimensions and tolerances in ANSI B16.9 with the exception of short radius elbows and return bends which are made to ANSI B16.28. Light-weight corrosion resistant fittings are made to MSS SP43.

Butt Weld Fittings are available to ASTM A403, ASTM A815 and MSS SP43. These standards require the fittings to be manufactured as follows:

- Seamless austenitic fittings are made from seamless pipe to ASTM A312.
- Welded fittings in austenitic grades are manufactured from welded pipe to ASTM A312 or plate to ASTM A240. Note that welded fittings manufactured from plate may have two-welds.
- Duplex (ferritic/austenitic) grades are manufactured from pipe to ASTM A790 or plate to ASTM A240.

ASTM A403/A815 Butt Weld Fittings are sub-divided into four classes:

- **WP-S:** Made from seamless pipe to ASTM A312 (Austenitic) or ASTM A790 (Duplex).
- **WP-W:** Manufactured from welded pipe to ASTM A312 (Austenitic) or ASTM A790 (Duplex). There is no requirement for radiography unless a manufacturer's weld has been introduced or there are welds made with the addition of filler metal.
- **WP-WX:** Of welded construction. All welds must be 100% radiographed in accordance with Paragraph UW-51 of Section VIII, Division 1 of the ASME Boiler and Pressure Vessel Code.
- **WP-WU:** Of welded construction. All welds must be 100% examined ultrasonically in accordance with Paragraph UW-51 of Section VIII, Division 1 of the ASME Boiler and Pressure Vessel Code. Note that this Class only applies to austenitic fittings made to ASTM A403.

CR Fittings are manufactured to the requirements of MSS SP43. These are light-weight fittings and do not require radiography.

Notes:

WP: Means Wrought Pipe

CR: Means Corrosion Resistant

Markings on tube and fittings

The full identification of the fitting should be marked on it including:

- Nominal Pipe Size (Nominal Bore)
- Schedule (Wall Thickness)
- Specification
- Grade
- Method of Manufacture (Seamless or Welded)
- Heat Number
- Manufacturer's Name or Symbol

Butt Weld Fittings

Notes

- Dimensions quoted in mm are 'Nominal' values from B16.9 (i.e. rounded equivalents of the inch dimensions). Refer to B16.9 for additional 'Max' and 'Min' metric dimensions.
- For tolerances see page 3-14.
- Other sizes listed in B16.9 are 5-2, 6-2¹/₂, 10-4, 12-5, 14-6, 16-8, 18-10, 20-12, 22-14 and 24-16.
- ¹ Weights are approximate and based on manufacturers' data (where available) for Schedule 40S/Standard fittings. See page 3-15 for further information.

Notes

- Dimensions quoted in mm (except T) are 'Nominal' values from B16.9 (rounded equivalents of the inch dimensions). Refer to B16.9 for additional 'Max' and 'Min' metric dimensions.
- The shape of caps shall be ellipsoidal and conform to shape requirements in the ASME Boiler and Pressure Code.
- For tolerances see page 3-14.
- 1 Weights are approximate and based on manufacturers' data (where available) for Schedule 40S/Standard fittings. See page 3-15 for further information.

24	24.00	610	12.00	305	6.00	152	27.25	692	0.50	13	24.24	616	23.97	609	51.30

Notes

- Dimensions quoted in mm are 'Nominal' values from B16.9 (rounded equivalents of the inch dimensions). Refer to B16.9 for additional 'Max' and 'Min' metric dimensions.
 - OD of barrel max and min dimensions (in and mm) are rounded. Refer to B16.9 for the exact values.
 - Long pattern stub ends are standard. Purchaser should specify if short pattern is required. Long pattern stub ends are also known as ASA Stub Ends.
 - Short pattern stub ends are used with larger flanges in Classes 300 and 600, and with most sizes in Class 900 and higher. When long pattern stub ends are used with flanges in Classes 1500 and 2500, it may be necessary to increase the length A.
 - Additional lap thickness must be provided for special facings (e.g. tongue and groove); this is within length A.
 - Dimension B conforms to ASME/ANSI B16.5, Pipe Flanges and Forged Fittings.
 - Gasket face finish shall be accordance with ASME/ANSI B16.5 for raised face flanges.
 - For tolerances see page 3-14.
- ¹ Long pattern weights are listed (short pattern weights are similar to MSS SP-43 lap joint stub ends, page 3-11). Weights are approximate and based on manufacturers' data (where available) for Schedule 40S/Standard fittings. See page 3-15 for further information.

Butt Weld Fittings

Range/Sizes - Lap Joint Stub Ends - MSS SP-43

Note:
Type A is shown.
Type B has a square corner, as indicated by the maximum dimension R in the table below.

Dimensions (based on MSS SP-43) and example weights

Nominal Pipe Size	Common		Length		Diameter of Lap		Radius of Fillet				Weight	
	OD at Bevel		A		B		Type A for Lap Joint Flange		R	Type B for Slip-on Flange		40S/STD ¹ kg/piece
	in	mm	in	mm	in	mm	in	mm		in	mm

24	24.00	610	6.00	152	27.25	692	0.50	12.70	0.06	1.52	25.65	

Notes

- Dimensions quoted in mm are equivalents of the inch dimensions (i.e. 25.4 x in). Metric dimensions are not specified in MSS SP-43.
- Length A and Radius R are applicable for Schedule 40S or thinner.
- Contact faces of stub ends shall have a modified spiral or concentric serration.
- For tolerances see page 3-14.

¹ Weights are approximate and based on manufacturers' data (where available) for Schedule 40S/Standard fittings. See page 3-15 for further information.

Butt Weld Fittings

Specifications - ASTM A403

Finish and repair

- **Surface discontinuities** deeper than 5% of nominal wall thickness to be removed.
- **Defect removal by grinding or machining.** The following are removed:
 - Surface discontinuity as above.
 - Surface checks (fishscale) deeper than $\frac{1}{64}$ in (0.4mm).
 - Mechanical marks deeper than $\frac{1}{16}$ in (1.6mm).
 - When removal reduces wall thickness below 87½% of nominal, the fitting is rejected or repaired.
- **Defect repair by welding**
 - Permitted for fitting made to specifications.
 - Purchaser agreement is necessary for weld repair of special fitting.
 - Repair is limited to 10% of outside surface and 33⅓% of nominal wall thickness.
 - All weld repairs are examined using liquid penetration test.
 - There should be no cracks in prepared cavities, or in finished weld, or in the surrounding $\frac{1}{2}$ in (13mm) of base metal.

Tensile requirements

Grade	UNS	Tensile Strength min		Yield Strength min		Elongation min% in 4D	
		ksi	MPa	ksi	MPa	Longit %	Trans %
All	All	75	515	30	205	28	20
All = All grades listed in the chemical composition table except those listed below

	S33228	73	500	27	185	28	20

Notes

- Grades or UNS designations are prefixed with letters 'WP' or 'CR' to indicate class.

Butt Weld Fittings

Specifications - General

Applicable specifications

Specifications applicable to buttwelding fittings are as follows:

- ASME/ANSI B16.9-2007 - Factory-made wrought steel buttwelding fittings.
- ASME/ANSI B16.28-1997 - Wrought steel buttwelding short radius elbows and returns.
- MSS SP-43 1991, Reaffirmed 1996 - Wrought stainless steel buttwelding fittings. This applies to 5S, 10S, and 40S wall thicknesses only.
- ASME/ANSI B16.25-1997 - Buttwelding ends. This defines various weld bevel designs and dimensions, beyond the scope of this manual.
- Wall Thicknesses.** Fittings are manufactured to match the wall thicknesses of pipe.
- Weights** quoted in the fitting tables are based on manufacturers' data and are approximate. Actual weights may vary from those quoted depending on the type of construction. For austenitic and duplex stainless steel, multiply the quoted weight by 1.014. For ferritic and martensitic stainless steel, multiply the quoted weight by 0.985.

Manufacture and test

- Materials and Manufacture. ASME/ANSI and MSS stainless steel buttwelding fittings are most commonly manufactured to ASTM A403.
- Production Testing. Test requirements are defined in ASTM A430.
- ASME/ANSI Test Requirements.** B16.9 and B16.28 do not require production testing of fittings although they must be capable of withstanding the rated pressure:

Pressure Ratings. The rated pressure is as for straight seamless pipe of equivalent NPS, wall thickness and material.

Proof testing to qualify the fitting design comprises a bursting strength test. The fitting is required to withstand, without rupture, 105% of the pressure P given by: $P = (2St) / D$ where

S = Actual ultimate tensile strength of a specimen from a representative fitting.

t = Nominal wall thickness

D = Outside diameter

- MSS SP-43 Test Requirements.** SP-43 does not require hydrostatic testing of fittings although they must be capable of withstanding 1.5 times the pressure ratings at 100 °F:

Pressure Ratings. Fittings produced to MSS SP-43 have the pressure ratings shown in this table.

Temperature	Schedule 5S	Schedule 10S
°F	Pressure, psi	
100	225	275
150	215	255
200	200	240
250	190	225
300	175	210
350	165	195
400	150	180
450	Not recommended for use at these temperatures	165
500		150
600		130
700		110
750		100

Butt Weld Fittings

Butt Weld Fittings

Weights

Buttweld fitting weights

As mentioned previously, the ANSI/ASME and MSS buttweld fitting specifications do not specify wall thicknesses and weights for fittings. Weights quoted in the dimension and weight tables are therefore based on manufacturers' information and should be considered as approximate and provided as a guide only (fitting weights can vary considerably between manufacturers due to differences in construction). The example weights quoted are for 40S or Standard (STD) wall thicknesses only. It is possible to calculate the approximate weight at any other wall thicknesses using the factors provided in the table below. These factors are calculated from the ANSI/ASME B36.19M and B36.10M pipe weights and are based on the proportional relationship of the pipe weights (kg/m) to the weights of 40S and STD wall thickness pipe at each NPS.

ASME/ANSI pipe sizes and weight multiplication factors for use in obtaining approximate fitting weights. For use with the example (40S/STD) weights provided in the ANSI/ASME tables of this section.

NPS	Multiplication Factors = Proportional relationship of pipe weights to 40S or STD pipe at each NPS ¹ . Multiply the example 40S/STD fitting weights (at the required NPS) by the factors below (at the same NPS) to give approximate weights at different wall thicknesses.																
	5S	10S	40S	80S	10	20	30	40	STD	60	XS	80	100	120	140	160	XXS

Notes

1 The relationship between pipe weights at each NPS can strictly only be applied to fittings where the same proportional relationship is maintained in the fitting. Less accurate results will therefore be obtained for reducing tees, for example, than for elbows, equal tees, etc. The type of fitting construction may also make the factors inaccurate.

Type	Joining Method	General Description
Weld Neck 		<p>Used in critical applications. These are circumferentially welded onto the system at their necks which means that the integrity of the butt-welded area can easily be examined by X-ray radiography. The bores of both pipe and flange match thus reducing turbulence and erosion.</p>
Slip On 		<p>This is slipped over the pipe and then fillet welded. Easy to use in fabricated applications.</p>
Blind 		<p>Sometimes called a blanking flange, this is used for blanking off pipelines, valves and pumps and as an inspection cover.</p>
Socket Weld 		<p>This is counter-bored to accept the pipe, which is then fillet welded. The bore of both the pipe and the flange are the same to ensure good flows.</p>
Screwed/Threaded 		<p>This requires no welding and is used to connect other threaded components in low pressure noncritical applications.</p>
Lap Joint 		<p>These are always used with either a stub end or a taft which is butt-welded to the pipe with the flange loose behind it. Thus the stub end or the taft always provides the sealing face. Easily assembled and aligned, it is favoured in low pressure applications. To reduce cost these 'backing' flanges can be supplied without a hub and/or made from coated carbon steel.</p>
Ring Type Joint 		<p>This can be employed on Weld Neck, Slip On or Blind Flanges for leak-proof connection at high pressures. The seal is made by a metal ring being compressed into a hexagonal groove on the flange face.</p>

Flanges

Introduction

Type	General Description
<p>Plate or Table (BS 10:1962) Standard BS10 Flanges</p> <p>Blind</p>  <p>Slip-on</p> 	<p>These are produced to suit Nominal Bore/NPS Pipe Sizes. They are produced from bar or plate rather than forgings and are not pressure-rated.</p> <p>Blind and Slip-On, flat-faced, types are readily available in grades 304L and 316L in sizes from 1/2" to 6" as Table D and Table E, with larger sizes and other Tables (thicknesses) made to order.</p> <p>These economical flanges are used for light-duty applications where corrosion resistance is the primary consideration rather than high pressure or temperature.</p>
<p>BS EN 1092 Part 1 Also referred to as PN Flanges (Formerly BS4504)</p>	<p>These are not interchangeable with ANSI Flanges. They are readily available in types 304L and 316L with various pressure ratings of which 10 Bar & 16 Bar are the most commonly used.</p>
<p>Metric ND/DN</p>	<p>Please refer to information about the Metric ND product range in section 7</p>
<p>Hygienic</p>	<p>Please refer to information about the Hygienics product range in section 6</p>

Flange faces

Of the four choices available the most common configurations are:

- For ANSI and BS EN 1092 – Raised Face
- BS 10 – Flat Face.

Note that this does not apply to Screwed or Lap Joint Flanges.

Type	General Description
Raised Face	To facilitate welding
Flat Face	
Ring Type Joint (RTJ)	For leak-proof connection at high pressures
Tongue & Groove – Small or Large	

Finish

The finish is given as a surface roughness measured as Arithmetic Average Roundness Height (AARH). The finish requirements are stipulated by the standards, such as ANSI B16.5 and are within the range 125AARH to 500AARH, which is equivalent to 3.2 to 12.5 Ra.

Pressure ratings

(The pressure rating will also determine the dimensions of the flange – Full details can be found in the relevant specification.)

Flange Type	ANSI B16.5	ANSI B16.47 Series A MSS SP-44	ASME B16.47 Series B API 605	BS EN 1092/ (BS4504)
	lbs	lbs*	lbs*	Bar
Weld Neck	150-2500	150-900	150-300	2.5-40
Weld Neck Ring Type Joint	300-2500	300-900	150-300	N/A
Slip On	150-1500	-	-	2.5-40
Slip On Ring Type Joint	300-1500	-	-	N/A
Threaded	150-2500	-	-	6-40
Lap Joint	150-2500	-	-	6-40
Blind	150-2500	-	-	2.5-40
Socket Weld	150-1500	-	-	N/A

Notes

* Flange sizes 26" and above.

What semi-finished product are flanges made from?

	Forging A182	Plate ASTM A240	Bar	Casting
ANSI B16.5	✓	✓	-	-
BS 3293	✓	-	-	-
MSS SP-44	✓	-	-	-
API 605	✓	-	-	-
BS EN 1092/(BS4504)	✓	✓	-	✓
BS 10	✓	✓	✓	✓

Notes

- ASTM A240 plate can be used to manufacture ANSI B16.5 blind flanges, but this is not generally accepted in the UK.
- Most small BS 10 flanges are normally made from bar as this is the most economical manufacturing process.

Notes

- Dimension B corresponds to the pipe inside diameter. Values quoted assume 40S/Standard wall thickness.
- Weights are based on manufacturer's data and are approximate.
- Flat face flanges may be provided at full thickness, C, or with raised face removed (the latter is nonstandard).
- For tolerances see page 4-12.

- Flat face flanges may be provided at full thickness, C, or with raised face removed (the latter is nonstandard).
- For tolerances see page 4-12.

Flanges

Specifications - ASTM A182/A182M

Forged or rolled alloy – steel pipe flanges, forged fittings, and valves and parts for high temperature service

This specification covers forged low alloy and stainless steel piping components for use in pressure systems. These include flanges, fittings, valves and similar parts manufactured to dimensional standards such as ASME/ANSI. Products made to this specification are limited to a maximum weight of 10,000 lb (4,540 kg).

Note

- Although low alloy steels are covered by this standard, only stainless steels (martensitic, ferritic, austenitic and duplex) are included in this summary.

Dimensions and tolerances

- ◉ **Dimensions and tolerances.** ASME/ANSI specifications B16.5 and B16.11 are referenced.
Flange dimensions and tolerances (see page 4-12).

Manufacture

- ◉ **Materials.** Refer to chemical composition table (stainless steel grades only shown). Elements not specified in the table are not permitted, specifically selenium or other elements added for free-machining properties.
- ◉ **The steel** may be melted by electric-furnace, or vacuum-furnace, or by either of these followed by vacuum or electroslag-consumable remelting. Vacuum melting or remelting is not suitable for grades containing or modified by nitrogen. Grade F XM-27Cb may be electron-beam melted.
- ◉ **Manufacture.** The steel is forged or rolled as near as possible to size and shape of the product. Small cylindrical parts (excluding flanges) may be machined directly from forged or rolled bar without additional hot working (limits defined in ASTM A234 apply for martensitic steels, in A403 for austenitic steels and A815 for duplex steels). Elbows, returns and tees are not machined directly from bar.
- ◉ **Heat treatment.** Refer to heat treatment table. Heat treatment of forgings may be performed before machining. For martensitic and ferritic grades, liquid quench followed by tempering is permitted, subject to purchaser agreement. Small cylindrical parts (excluding flanges) machined directly from forged or rolled austenitic steel may be furnished annealed to this specification with subsequent light cold drawing or straightening permitted.
- ◉ **Marking.** Each forging is marked with manufacturers name, heat number (or heat identification), designation of service rating, specification number, grade (e.g. F304) and size.
Additionally: QT = Liquid quenched and tempered
W = Welded
WNS = Not post repair weld heat treated.

Finish and repair

- ◉ **Appearance.** Forgings have a workmanlike finish and shall be free of scale, machining burns and injurious, imperfections (i.e. those that encroach on minimum wall thickness).
- ◉ **Defect repair by grinding or machining.** The following may be removed:
 - Surface discontinuity as above.
 - Mechanical marks, abrasions or pits deeper than $\frac{1}{16}$ in (1.6mm).
- ◉ **Defect repair by welding:**
 - Permitted unless purchaser prohibits.
 - Defect removal by chipping or grinding is verified by magnetic particle inspection.
 - Repair is limited to 10% of surface area and $3\frac{1}{3}\%$ of nominal wall thickness.
 - Repair welding electrodes and post weld repair heat treatments are defined in A182 but are not detailed in this summary.

American national standards ASME/ANSI B16.5 and B16.47 together cover pipe flanges up to NPS 60 (NPS 48 is the largest detailed in this summary). ASME/ANSI B16.47 covers two series of flanges, Series A which is equivalent to MSS SP-44 (the 1996 Edition of MSS SP-44 complies with B16.47 tolerances), and Series B which is equivalent to API 605 (API 605 is now cancelled).

Dimensions and tolerances

Tolerances on flange dimensions (ASME/ANSI B16.5)

Dimension	Range	Tolerance	
		in	mm
General and Blind Flanges (For blind flange dimensions see pages 5-8/9):			
G (raised face diameter)	≤ NPS 24	±0.03	±0.76
	≥ NPS 26, with 0.06 in raised face	±0.08	±2.03
	≥ NPS 26, with 0.25 in raised face	±0.04	±1.02
I (bolt hole diameter)	All	No tolerance in B16.5 or B16.47	
J (bolt circle diameter)	All	±0.06	±1.52
Centre to centre of adjacent bolt holes	All	±0.03	±0.76
Eccentricity of bolt circle and machined facing diameters	≤ NPS 2½	±0.03	±0.76
	≥ NPS 3	±0.06	±1.52
Weld Neck Flanges ¹ (For dimensions see pages 5-4/5):			
D (overall length)	≤ NPS 4	+0.06	+1.52
	NPS 5 to 10	+0.06, -0.12	+1.52, -3.05
	NPS 12 to 24	+0.12, -0.18	+3.05, -4.57
	≥ NPS 26	±0.19	±4.83
Thickness of hub	All	> 87.5% of pipe nominal wall thickness	
Slip on (see page 5-6/7), Lap Joint and Socket Welding Flanges:			
B (inside diameter, or bore)	≤ NPS 10	+0.03, -0.0	+0.76, -0.0
	≥ NPS 12	+0.06, -0.0	+1.52, -0.0
Threaded Flanges:			
B (counterbore) (Not applicable for Class 150 lb)	≤ NPS 10	+0.03, -0.0	+0.76, -0.0
	≥ NPS 12	+0.06, -0.0	+1.52, -0.0

Flanges

Range/Sizes - EN 1092 / (BS4504)

BS4504 is now obsolete and has been replaced by EN 1092. However the dimensions and tolerances have not changed.

Flange types and methods of manufacture

ISO EN	BS	Type of Flange and Collar	Forged ^a	Cast	Made from flat products (plates)	Machined from rolled or forged bars and forged sectional steel	Bent and electric welded from bars, sectional steel or strip ^{b,c,d,e}
01	101	Plate flange for welding	yes	no	yes	yes	yes
05	105	Blind flange	yes	no	yes	yes	no
11	111	Weld-neck flange	yes	no	no	yes	yes, for \geq DN 700
12	112	Hubbed slip-on flange for welding	yes	no	no	yes	no

a Seamless rolled, pressed, forged.

b Only one radial weld is allowed under DN 1800.

c Welded flanges allowed only for an application up to 370°C in conformance with EN 13480-3:2002, D.4.4.

d In case flanges are made by cold forming of a base material e.g. flat product, some mechanical properties, like elongation after fracture (A) and impact energy (KV), will be impaired due to cold forming without subsequent heat treatment.

Repairs by welding

With the exception of weld repairs carried out according to BSEN 1092-1:2007 (E) clause 5.11, repairs by welding are permitted only by written agreement of the purchaser.

Within the certificate for material or component relevant documents shall be noted, that approved welding procedure and welders qualification have been applied.

Bolting

Flanges shall be suitable for use with the number and size of bolting as specified in the Tables on pages 4-14 to 4-18. The bolting shall be chosen by the equipment manufacturer according to the pressure, temperature, flange material and gasket so that the flanged joint remains tight under the expected operating conditions. For selection of bolting, see EN 1515-1, for combination of the materials of flanges and bolting see EN 1515-2, for information.

Gaskets

The various gasket types, dimensions, design characteristics and materials used are not within the scope of this European Standard, Dimensions of gaskets are given in the series of standards EN 1514.

Notes

- Dimension B is the range thickness with or without a raised face.
- Dimension C is the maximum diameter of the centre portion of a blank flange face which need not be machined.
- For drilling details see page 4-14.
- For tolerances see page 4-19.
- For facing types and dimensions see pages 4-20 and 4-21.

Flanges

Specifications - EN 1092 (BS4504)

British Standard BS 10 : 1962 - Specification for Flanges and Bolting for Pipes, Valves, and Fittings. This covers plain, boss, integrally cast or forged, and welding neck type flanges, in ten tables. Although BS 10 is obsolescent, it remains in use for the dimensions of light duty, economy stainless steel flanges in applications where corrosion resistance and/or hygiene, rather than high pressures and temperatures, are the primary considerations. The following tables detail the applicable standard dimensions from Tables D, E, F and H of BS 10.

Flange dimensions based on tables D and E of BS 10 : 1962

Common Flange Size Designation (Nominal Bore of Pipe)	BS 10 Table D Dimensions					BS 10 Table E Dimensions

Notes

- Bolt hole diameters are as follows:
 For 1/2 in and 5/8 in bolts, the bolt hole shall be 1/16 in larger than the bolt diameter.
 For 3/4 in bolts and larger, the bolt hole shall be not more than 1/8 in larger than the bolt diameter.

BSP Fittings

Introduction/Range

- BSP fittings are a family of fittings used to connect up threaded pipe and equipment.
- They are manufactured from pipe, bar, hollow bar, castings or forgings.
- The pipe to be threaded must have a wall thickness of Schedule 40S minimum.
- The fittings are used in non-critical, low pressure applications where welding is not possible or required. They therefore provide a relatively low cost method of connection.
- BSP fittings are usually fitted with a sealant (paste or tape such as PTFE) and are considered to be permanent pipe-work.
- Low Pressure BSP Fittings are rated at 150lb and are made to wrought iron specification BS 1740.
- BSP fittings are made only in type 316.
- They are provided with a Certificate of Conformity only, and not a full Test Certificate.
- Sizes 1/8 to 3 inch are the most commonly used and thus the most readily available.
- External MALE threads are tapered and Internal FEMALE threads are parallel. The threads are cut to BS21: Part 1: 1985 and are called Whitworth Threads – See below.

>65 to 75	12	6.0
>75 to 110	16	-
>75 to 150	-	8.0
>150	-	10.0

Stainless Steel Hygienics is the name given to a range of tube and fittings used in applications requiring a clean and sanitary flow of liquids and where it is essential to avoid contamination of the products being carried. These applications cover the food processing, beverage, biotech and pharmaceutical industries including breweries and dairies.

- The applications are low pressure with a maximum of 150lbs.
- The products are available in grades 304L and-316L.
- The size range is from 1/2 inch to 4 inch O/D.
- The tube and fittings are of welded construction with the internal bead rolled to flatten it and eliminate crevices, thus preventing interruptions to the flow and eliminating the risk of contamination or bug traps as well as facilitate easy cleaning.
- The tube and fittings are offered with a choice of external finishes:
 - Descaled
 - Bright Annealed
 - Dull Polished
 - Semi-Bright or Bright Polished.

Manufacturing standards

- Hygienic tubes are manufactured to ASTM A270, DIN 11850, ISO 2037 and BS 4825 Part 1.
- Hygienic fittings are manufactured to BS 4825 Parts 2 to 5.

Markings on tube and fittings

Tube and fittings with a bright annealed or polished finish will be unmarked.

Hygienics

Hygienic Bends and Tees - BS 4825 : Part 2

There are two types of bends and tees available, the Short type and Long type. For bends, the Short type simply comprises a 90° bend, while the Long type has a straight leg added at both ends. Tees have equivalent dimensions making them interchangeable. The straight leg of long type bends and tees was originally added to enable expanded type clamp and union parts to be fitted, but they are now widely used in all-welded installations.

Dimensions and tolerances

OD	Short Type			Long Type			Max Deviation	
	A	B	C	A	B	C	D	E
mm	mm	mm	mm	mm	mm	mm	mm	mm
12.7	-	-	-	45	25	1.2	0.1	0.2
15.88	-	-	-	55	25	1.2	0.2	0.4
19.05	-	-	-	60	25	1.2	0.2	0.4
25.4	43.5	25	1.6	65	25	1.6 (or 1.2 ¹)	0.25	0.5
38.1	63.5	25	1.6	85	25	1.6 (or 1.2 ¹)	0.3	0.6
50.8	88.5	30	1.6	110	30	1.6 (or 1.2 ¹)	0.4	0.8
63.5	113.5	35	1.6	135	35	1.6	0.5	1.0
76.2	133.5	38	1.6	155	38	1.6	0.5	1.0
101.6	173.5	38	2.0	195	38	2.0	0.7	1.4

Notes

1 The 1.2mm wall thickness is for use with expanded fittings.

• Length tolerances. +0.5mm, -0mm.

Clamp fittings provide a crevice free joint and, depending on the clamp design, requires no tools for assembly or dismantling for cleaning. Provides quick method of regularly opening up a system and often has some kind of closure device such as a 'Triclover' clamp. Used where corrosion and contamination are particular hazards, as in the pharmaceutical industry. Also used in systems carrying warm semi-solids and viscous liquids, such as chocolate and tomato sauce, which must not cool in the line but tend to cause regular blockages.

Clamp fittings comprise four parts – two welding ferrules, a seal ring and a clamp. The ends of the tubes and/or fittings to be joined have a welding ferrule fitted by welding (or expansion on to expanded type parts if used). The joint is made by positioning the welding ferrules together, with a seal inserted between the faces, and then clamping the ferrules together. The clamp is not in contact with the contents of the pipe and may be made of any suitable material.

Assembly

Hygienics

Clamp Fittings - BS 4825 : Part 3

Welding ferrule

OD	A	B	C	D	E	F

101.6	97.6	101.85	119.0	110.0	21.5	2.85

Seals

Two types of seal are defined in BS 4825, the first for use when a joint is to be frequently disconnected and the second for use in less frequently disconnected joints. The dimensions of both types are given below:

OD	A	B	C
mm	mm	mm	mm
25.4	22.8	43.5	50.5
38.1	35.5	43.5	50.5
50.8	48.2	56.5	64.0
63.5	60.5	70.5	77.5
76.2	73.2	83.5	91.0
101.6	97.8	110.0	119.0

The International Dairy Federation, IDF, coupling provides a crevice free joint originally designed for applications where frequent dismantling for cleaning would not be necessary. They may be operated at pressures up to 1.6 MPa.

The Liner is machined and the Nitrile or EPDM Seal is a square section and is more substantial than the RJT. The IDF Union also has a thicker Nut than the RJT. It is machined rather than pressed and is considered easier to use.

Compared to the RJT, the IDF has a smoother and cleaner flow line that is free of crevices and bug traps. It is used where CIP (Clean In Place) systems prevail, with the RJT only tending to be used where very regular access is needed.

IDF type couplings comprise four parts – a male part, a liner, a seal ring and a hexagonal or round nut. The ends of the tubes and/or fittings to be joined have a male part and liner fitted by welding (or expansion on to expanded type parts if used). The joint is made by positioning the male part and the liner together, with a seal inserted between. The nut is then slipped over the liner, screwed on to the male part and tightened against the liner to compress the seal.

BS 4825 : Part 3 requirements for IDF union parts follow.

Assembly

The illustration above shows the assembly of an IDF union with welded parts.

Options:

- Expanded IDF expanded type union parts are available.
- Round nuts. True IDF round nuts have no slots on their circumference, making them tamper proof, but necessitating the use of a special spanner.

Hygienics

IDF Unions - BS 4825 : Part 4

Welding male part (threaded)

Notes

- An ACME form thread is used.

Hygienics

RJT Unions - BS 4825 : Part 5

Ring Joint Type, RJT, unions are easily assembled and dismantled for cleaning purposes, this being a result of their having a Whitworth form thread. The RJT joint is not crevice free and may accumulate a deposit of the product being passed. However, present day cleaning systems are able to sanitise this area successfully without dismantling in the majority of applications. RJT unions may be operated at pressures up to 1.0 MPa.

RJT type couplings comprise four parts – a male part, a liner, an O-ring seal and a hexagonal nut. The ends of the tubes and/or fittings to be joined have a male part and liner fitted by welding (or expansion on to expanded type parts if used). The joint is made by positioning the male part and the liner together, with a seal inserted between. The nut is then slipped over the liner, screwed on to the male part and tightened against the liner to compress the seal.

BS 4825: Part 5 requirements for RJT union parts follow. Additional RJT components are also available (see page 6-11).

Assembly

The illustration above shows the assembly of an RJT union with welded parts.

Options:

- ◆ Expanded RJT expanded type union parts are available.

Notes

- 1 Carbon 0.040% max is necessary for tubes where many drawing passes are required, as with outside diameter < 0.5 in (12.7mm) or nominal wall thickness < 0.049 in (1.2mm) (minimum wall thickness < 0.044 in (1.12mm))

BS 4825 Part 1 / EN20286 - dimensions and tolerances

- **O/D Tolerance.** $\pm 0.5\%$ or 0.1mm whichever is the greater.
- **Wall Thickness Tolerance.** $\pm 12.5\%$.
- **Surface Finish.** Internal 1.0Ra Maximum / External 2.5Ra Maximum.
- **Length.** For lengths up to and including 6 metres +3mm -0mm / For lengths over 6 metres +6mm -0mm.

Metric Tube & Fittings

Introduction/Specifications

Stainless steel metric tubulars range

A complete range of fittings including elbows, tees, reducers, end caps, collars, backing flanges and clamps is available.

Advantages

This ID based system brings many advantages including:

- Light weight
- Systems flexibility including ease of alteration
- Fast welding times
- Low consumables usage
- Attractive appearance
- Clean/hygienic/high-tech image
- Low environmental impact
- Recyclability
- Simple fabrication and erection
- Good mechanical properties
- Good ductility
- Low maintenance
- Long service life
- Smooth surface with no coatings or linings

Grades

A range of grades is available from stock or on fast-track production:

BSEN 1.4307 (304L)

BSEN 1.4404 (316L)

BSEN 1.4432 (316L High Molybdenum)

Sizes shown throughout are the most popular. Many more are available, please contact United Alloys Limited for details.

Approved for use in public water supplies

Specifications

• Dimensional tolerances to EN/ISO 1127

- **Outside Diameter (Class D3):** $\pm 0.75\%$ / minimum $\pm 0.3\text{mm}$
- **Outside Diameter for tubes 168.3mm O/D & above (Class D2):** $\pm 1.0\%$ / minimum $\pm 0.5\text{mm}$
- **Wall Thickness (Class T3):** $\pm 10\%$ / minimum $\pm 0.15\text{mm}$

• Lengths

- 6 metre random lengths with plain ends.

• Finish

- Unannealed, Pickled.

Clamps and clips

A range of tube Clamps and Clips is available in Grade 1.4404 (316L) Stainless Steel as well as Zinc Plated Mild Steel.

Architectural Tube & Fittings

Slotted Tube/Glass Clamps

Slotted tube, types 304L/316L

50mm O/D x 1.5mm wall x 20mm/20mm slot

48.3mm O/D x 1.5mm wall x 30mm/27mm slot

42.4mm O/D x 1.5mm wall x 24mm/24mm slot

Rubber Inserts

90 Degree Angle – Horizontal

90 Degree Angle – Vertical

Glass clamps – 6mm–12mm glass, type 316, satin finish

Curved with Curved Base

Curved with Flat Base

Square with Curved Base

Square with Flat Base
