

# DA100510 10 / 5 MHz Distribution Amplifier

#### **General Description**

The DA100510 can be used to synchronize up to twelve instruments to a frequency reference input. The reference input frequency is 10 MHz and the output frequency is exactly half the input frequency, i.e 5 MHz. The DA100510 incorporates AGC (automatic gain control) so that a 10 MHz input can be varied from -10 dBm to +20 dBm without the outputs changing by more than 0.4 dB. Inputs as low as -30 dBm still produce a useable output. The pure sinewave output (harmonics are 65 dB down) enables the DA100510 to work in the most demanding applications.

#### **Outputs**

There are ten, 5 MHz, sinewave outputs. Each 5 MHz output is isolated from the input and each other. Therefore the reference oscillator connected to the DA100510 input is protected against load variations, short circuits etc. that may be applied to the outputs. Two additional squarewave outputs can be switched in frequency from 5 MHz, 2.5 MHz, 1 MHz, 500 kHz, 100 kHz and 1 pps. These outputs are ideal for instruments that do not use a 5 MHz timebase. A rear slave output can be connected to a second DA100510 (or more) to give up to twenty-four outputs (or more). See "Applications" below.

### **Applications**

The DA100510  $\,$  10 / 5 MHz Distribution Amplifier is ideal for use in calibration or standard laboratories, radio repair workshops or production facilities. By using the rear slave output, many DA100510's can be connected together to give multiple outputs

#### **Miscellaneous Information**

The DA100510 is a highly reliable unit with an MTBF of over 30 years. The DA100510 is housed in a fully screened 19" rack mount case and operates from a 115 VAC or 230 VAC supply or external 12 V DC. The DA100510 is CE marked for sale within the EEC.

## **Options**

The DA series can be modified upon special request to work at different frequencies than 10 / 5 MHz. For example the DA151510 accepts a 15 MHz input and has 15 MHz outputs. Other frequencies to 20 MHz can also be accommodated.

Option 01 is an Alarm Relay that is activated when the 10 MHz input signal is present. Two changeover relay contacts can be used to raise an alarm should the input signal or power be lost. Two logic outputs also show the alarm status.

Option 02 is a redundancy option allowing two DA100510's to be operated in parallel giving a fully redundant output. A typical system consists of two Frequency Standards ("A" and "B") and two DA100510 distribution amplifiers ("A" and "B"). The system would have twenty redundant outputs. Normally the "A" pair will provide the 5 MHz output. In the event of a failure of the Frequency Standard ("A") or DA100510 ("A"), the "B" system would automatically switch in and provide the 5 MHz output.

## **DA100510 SPECIFICATIONS**

| Specification Parameter            | Specification                             | Comments                                |  |  |  |
|------------------------------------|---|---|--|--|--|
|                                    | Input                                     |   |  |  |  |
| Frequency                          | 10.000000 MHz                             | 50 Ω BNC Connector on rear panel        |  |  |  |
| Bandwidth (-3 dB)                  | 250 kHz                                   |   |  |  |  |
| Impedance                          | 50 Ω                                      |   |  |  |  |
| Input VSWR                         | < 1.15 @ 10 MHz                           |   |  |  |  |
| Input Level                        | +20 dBm to -10 dBm                        | Output Changes by < 0.4 dB              |  |  |  |
|                                    | Outputs 4 to 13                           |   |  |  |  |
| Output Waveform                    | Sinewave                                  | 50 Ω BNC Connector on rear panel        |  |  |  |
| Output Frequency                   | 5 MHz (Exactly half the input frequency)  | Subject to the DA100510's jitter spec   |  |  |  |
| Output VSWR                        | < 1.5: 1 @ 5 MHz                          |   |  |  |  |
| Output level                       | From $0 \text{ dBm to} > +12 \text{ dBm}$ | Each output internal adjustable         |  |  |  |
| Harmonic Distortion at 5 MHz       | -65 dBc                                   | Output set to +10 dBm                   |  |  |  |
| Jitter (1 second, Allan Deviation) | < 2 ps rms                                |   |  |  |  |
| Input to Output Isolation          | > 100 dB                                  | Typical                                 |  |  |  |
|                                    | Output 2 to 3                             |   |  |  |  |
| Output Waveform                    | Squarewave                                | 50 Ω BNC Connector on rear panel        |  |  |  |
| Level                              | 0 - 5V (open circuit) 0 - 2.7 V (50 Ω)    | TTL Compatible                          |  |  |  |
| Frequency                          | 5, 2.5, 1, 0.1 MHz, and 1 pps             | 1 pps = 1 pulse per second (1 Hz)       |  |  |  |
| Risetime                           | < 30 ns                                   | At 1 MHz                                |  |  |  |
|                                    | Output 1 (Slave Output)                   |   |  |  |  |
| Output Waveform                    | Sinewave @ > -5 dBm                       | 50 Ω BNC Connector on rear panel        |  |  |  |
| Phase Noise (Typical)              |   |   |  |  |  |
| At 10 Hz Offset                    | -127 dBc/Hz                               | Measurement uncertainty ± 4 dB          |  |  |  |
| General                            |   |   |  |  |  |
| Power (AC)                         | 115 VAC or 230 VAC ± 10%                  | 30 Watts max                            |  |  |  |
| Power (DC)                         | 11-13 VDC @ 1.3 Amps                      |   |  |  |  |
| Size and weight                    | 483 x 300 x 44 mm and 4.6 kg              | Width x Depth x Height                  |  |  |  |
| Ambient Operating Temperature      | -10°C to +50 °C                           |   |  |  |  |
| Options                            |   |   |  |  |  |
| Option 01                          | Dual changeover alarm relay contacts      | Plus two 8V logic alarm outputs         |  |  |  |
| Option 02                          | Redundancy                                | Requires two units                      |  |  |  |
| Option 03                          | Internal Backup 10 MHz oscillator         | Activated if input signal/power is lost |  |  |  |
