

Locinox Verticlose Pedestrian Gate Closer

This fully featured gate closer gives adjustment to both the closing speed and closing force functions of the gate closer. Both adjustments can be increased and decreased as required.

All its external components are made from stainless steel and aluminium which ensures the closer will not rust with age. This cleverly designed closer is built to withstand the changeable weather conditions and the closing speed is unaffected by changes in humidity and temperature.

Careful design of both the housing and operating lever minimise the opportunities for vandalism while the use of hexagon socket screws and "quick-fix" fixings making the closer easy to fit and more resistant to theft.

Each closer comes with easy to follow installation dimensions. Locinox Verticlose gate closers are not handed and will fit left or right hinged gates.

Verticlose is one of the few gate closers which can be used to close gates hung between brick pillars or walls because the housing will mount to the same face of the brick pillar or wall upon which the hinges are mounted and provide effective closing with most applications.

As with all gate closers, it is advisable to fit a stop restricting the opening angle to avoid damaging the closer.

Technical overview:

Material	Stainless steel & aluminium
Finish	Silver paint
Hinge arrangements	In-line and offset
Opening angle	90°
Gate size	1200W x 2100H x 80kg
Types of gate materials	Metal or timber
Gate closing speed	Adjustable
Gate closing force (pressure)	Adjustable

Ordering overview:

Model	Part Reference
Verticlose - silver	GATECLOSER050
