Locinox - Standard Gate Lock with Exit Push Pad

This variation of the Locinox Standard lock is suitable for gates that are part of an emergency exit route and a panic situation is unlikely to arise - and for ease of operation when carrying parcels or other items requiring both hands.

Exit and entry using the push pad or handle is only possible when the deadbolt is not engaged. The deadbolt is engaged by making one turn of the key. The deadbolt will then provide additional night-time security. With the deadbolt engaged, exit and entry are NOT possible using the handle or push pad.

The Locinox Standard lock with push pad is easy to install and requires no welding of any parts. Its aluminium lock case and stainless steel lock parts ensure a rust free life - not rusting from the inside or outside.

A strong tamper resistant construction provides superior levels of security and decreases the likelihood of damage to the lock. All fixing screws are only accessible when the gate is open, discouraging theft of the lock. Both latch bolt and deadbolt projection are adjustable without removing the lock case making final adjustment really easy.

It is available in three colours, black, silver and green. Three models are offered to fit gate frame profiles: 10-20 mm solid bar, 30-50 mm box section and 40-60 mm box section (see ordering details below).

Each lock comes with a handle, push pad, lock keep and three keys. We also provide a drawing giving drilling hole sizes and positions.

Technical Overview

Latch rotates 180° for left and right handing
15 mm latch bolt retraction
25 mm deadbolt throw with 1 turn of key
20 mm latch bolt adjustment
20 mm deadbolt adjustment
Deadbolt overrides outside handle & push pad
Stainless steel chassis and lock parts
Supplied with handle, push pad, keep & 3 keys
Models for 10 mm solid up to 60 mm box section
