Kanon design, engineer, manufacture and install a comprehensive range of gravimetric and volumetric Container Filling and Materials Handling Systems for use in both safe and hazardous areas.

The range consists of semi or fully automatic systems capable of filling either a single drum/container or multi-drums/containers on a pallet and covering a wide variety of container sizes from approximately 100ml to 6000 litres or 100g to 6 Tonnes.

Appropriate materials are used during manufacture to cope with potentially aggressive products and Weights and Measures approval is available to cover either 'By Weighing' or 'Mass Flowmeter' measurement.

We can provide a total solution to filling needs including:

- Depalletisers
- Driven or Gravity In-Feed and Out-Feed Conveyors
- Labelling Equipment
- Fume Control and Extraction Equipment
- Bung/Cap Opening and Closing Equipment
- Lid Placement, Pressing and Closing Equipment
- In-Feed and Out-Feed Collation Tables
- Palletisers for Drums and Containers

The Drawing on the left shows a typical system for the filling of 5 litre circular and rectangular section containers featuring Interchangeable Carousels, In-Feed and Out-Feed Conveyors and Cap and Lid Placing and Closing Equipment.

We offer a full design and engineering service for Custom built systems and can provide complete Project Management for all projects.

For further details please contact us at the above address.
