Legislation demands the provision of Fall Arrest or Fall Prevention systems whenever personnel are working at height.

Typical applications include access to the top of Tankers and similar vehicles, access to Tank and Silo farms and Rooftop access for the purpose of carrying out routine maintenance or repairs.

Kanon are approved Designers and Installers of both Line type and Rail type Fall Arrest and Prevention systems.

The photograph on the left shows a typical example of the installation of a Line type Fall Arrest system used, in this application, to provide safe access to the top of Road Tankers.

The project involved the design and provision of the steel support structure as well as supply of the components of the actual Fall Arrest system, installation and commissioning.

Installation, onto pre-prepared foundations, and commissioning was completed in a single day.

The photograph on the right shows how a Rail type system is fixed horizontally when being used for Fall Prevention purposes. Rail systems can also be fixed vertically overhead for use as Fall Arrest systems.

Line and Rail systems are supplied complete with a comprehensive range of Personal Protection Equipment including Lanyards, Harnesses and different lengths of Fall Arrest Lines contained within Fall Arrest Blocks.

Both systems are fully approved to all relevant standards and a wide variety of Fixings, Supports and Bends is available to allow systems to be tailor made to suit individual site requirements.
