

ALPHA LIGHTING

Industrial and Commercial Lighting Specialists

Fluorescent

Installing energy efficient fluorescent tubes has been demonstrated to reduce a company's CO2 emissions, as well as saving it money – both high priority issues for many businesses.

On average, 25% of a typical business's electricity costs come from lighting alone. This can be reduced significantly by upgrading to an energy efficient lighting system, which, as well as reducing your carbon footprint, also significantly improves the working environment for your employees.

Replacing fluorescent lighting with a retrofit module or an LED equivalent offers instant savings on both maintenance and energy costs. These alternatives are available in several shades of white; including warm white, cool white and day light. We are available to advise on which type of fluorescent tube is best suited to any particular application; be it a factory or large industrial premises, offices, public buildings, galleries, museums and shops.

We can offer site visits and pay back schedules to clients which show the dramatic savings offered by our products.
