

LIQUID

Our expertise is in bins and liners from 200 liter upto 1250 liter. We claim to have the meanest, leanest, cleanest and above all greenest bins and drums in the world, especially when combined with our pooling service.

Juices, concentrates, purees, oils, milk, egg and many other aseptic and non-aseptic products need to be safely and economically transported. Contraload can give the right advise about the best bin for your particular circuit.

For every bin or drum, there is a liner ... Qbig is a famous Dutch liner expert with whom we have been successfully working with for several years. Liners are a delicate and vital part of our business therefore we work with 100% liner experts that can solve any challenge we come across !

WHAT IS THE BEST SOLUTION FOR YOUR COMPANY?

Every supply chain is unique, but can have a lot in common with others. Depending on where your company is in relation to your customers (geography), the volumes you are producing and sending (quantity) to each customer, the weight and sensitivity of your products and how long your products stay on the shelves (cycle time) the supply chain costs can vary quite a bit. Contraload can give you independent expert advice on the best loadcarrier for the job and in most cases build a tailored or standard service around your exact logistical requirements.
