

Doors NetXtreme™ Access Control Software

Doors NetXtreme

Doors NetXtreme Access Control Software

- Software Application to manage Keri's new *NetXtreme* TCP/IP hardware platform
- Non-browser based for enhanced security
- Familiar *Doors*™ operation, but with an updated look and feel
- Thin Client/Server Architecture for easy software transportability
- Multiple Concurrent Operators across Multiple Concurrent Sites
- Royalty free, enterprise-level SQL Database
- Automatic or Manual Configuration of hardware
- True 1-button Auto Configuration and Automatic IP address assignment

Doors NetXtreme™ is Keri's newest access control software application, designed to manage the new *NetXtreme* Ethernet-based hardware platform. It offers all of the convenience of a browser-based application with none of the security risks associated with one. At a mere 15 megabytes in size, the Thin Client application can fit virtually anywhere. Updates are pushed automatically to the Clients when the Server is updated, eliminating the maintenance necessary on other applications.

Like it's predecessor *Doors*™, the software is extremely easy to learn and operate, yet powerful enough to meet most applications. In addition to the sophisticated access control functionality it provides, *Doors NetXtreme* allows multiple Operators to manage and monitor an unlimited number of sites concurrently.

2305 Bering Drive • San Jose, California 95131
