

# Hallite 780

# Hallite 780

The Hallite 780 is a high quality double acting compact piston seal.

The robust assembly has been designed specifically for one piece pistons, and uses a rubber sealing element that has proved itself in service to be extremely wear resistant and capable of working most effectively in a wide range of medium duty applications. The seal is also suitable for two piece pistons.

The assembly comprises a rubber sealing element, two split support rings and two split L-shaped bearings, one of each located either side of the seal.

The nitrile rubber sealing element is designed with multi-lips for efficient dynamic sealing with minimal low pressure friction and, when pressurised, be protected from extrusion damage by the extending lips of the support ring. The support ring is manufactured from a tough, flexible polymer and scarf cut for assembly.

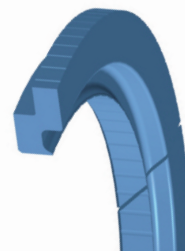

Both the L-shaped bearings and support rings are grooved to ensure that the fluid pressure properly energises the sealing element and to prevent the possibility of any pressure trapping within the seal assembly.

- **Multi lips for efficient dynamic sealing**
- **Tough, flexible materials**
- **Well proven design**
- **Low friction**
- **Long life**
- **Effective in a wide range of medium duty applications**

**Bearing**  
Thermoplastic

**Anti Extrusion Ring**  
Thermoelastomeric

**Sealing Element**  
Nitrile

	METRIC	INCH
Maximum Speed	0.5m/sec	1.5ft/sec
Temperature Range	-30°C to +100°C	-22°F to +212°F
Maximum Pressure	400 bar	6000 psi
