

TECHNOLOGY IN TEMPERATURE

3 second response time

ThermaSprint

Serious about Fast Food?

ThermaSprint

For speed and strength choose ThermaSprint temperature probes – up to 10 times faster than conventional probes.

What is ThermaSprint?

ThermaSprint technology represents a new manufacturing method for TME temperature probes.

What are the advantages?

A fantastic 3 second response time across a range of needle types – combined with the strength of TME's robust encapsulated handle design.

How does it work?

ThermaSprint technology allows the sensing element of the probe to become an integral part of the needle, producing an extremely fast response for all product temperature measurements.

Choose a probe

ThermaSprint technology is now available on TME's SOLO thermometer and TME's best-selling needle probes.

- Standard TP05
- Extended length TP06
- Small diameter TP04
- New reduced tip TP11
