

The Open and Shut case of the Hingless Frame

It may sound like the start of an intriguing mystery, but in reality it is the answer to an ongoing problem faced by many maintenance/facility managers who have to maintain external notice boards.

The weather plays havoc with the hinges causing corrosion which, if left, eventually leads to seizure and damage to the main frame of the notice board.

Some may suggest that the answer is to use expensive Stainless Steel hinges, and they may well have a point, but Jtech Services can now offer an alternative solution.

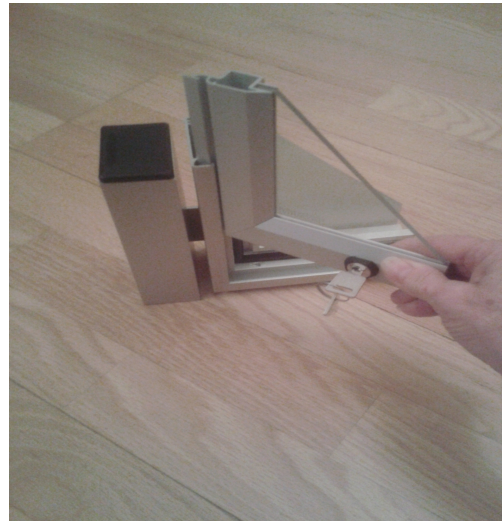

Notice Boards supplied by Jtech Services through their www.jtechrandpservices.co.uk website overcomes this problem in a neat and simple way – remove the hinge altogether!

Utilising the precision of modern manufacturing techniques within the extrusion industry our notice board manufacturer has developed a simple design that eradicates the need for a hinge at all.

A follow on benefit of this development is that, should the door need replacing due to vandalism etc it can be re-placed without removing the whole sign, thus keeping maintenance costs and downtime to a minimum.

For more information visit www.jtechrandpservices.co.uk and see how you could use one of our Notice Boards on your project.

Or like our Jtech Services page on Facebook and see our latest projects as they happen.
