

## Petrol Engine Driven Mobile Compressors

The design and manufacture of high mobility compressors is a key area of Factair operations. Factair produces a wide range of engine driven vane compressors. The CompAir rotary vane air end provides a compact and reliable source of compressed air, which can be powered in a number of ways.

The range is built around the Hydrovane VO2 which is driven by a Honda GX240 and VO4 which is driven by a Honda GX340. These provide an output of 4.5 l/s FAD and 10.5 l/s FAD at 7 bar respectively (at 10 bar the output is 3.4 l/s and 9.3 l/s).

One advantage of the CompAir compressor is that an air receiver is not required. This has helped Factair to build a range of compressors that is used in a wide variety of applications from driving power tools on site to blowing fibre optic cables underground.

To cater for increasingly diverse applications, Factair has introduced a new modular concept. This now provides the opportunity to choose from a wide range of accessories that can be installed on the unit during manufacture or supplied as simple retrofit kits, giving the opportunity to easily change the application for which the unit can be used.

The accessories available within the modular concept are:-

- Compact onboard wheel kit
- Site mobile pneumatic wheel kit
- Electric start engines
- Aftercooler
- Filtration and lubrication systems
- Tool tray

VO2P

VO4PE Electric Start Version

Model	FAD @ 7 bar litres/sec (cfm)	FAD @ 10 bar litres/sec (cfm)	Overall Length (mm)	Overall Width (mm)	Overall Height (mm)	Weight Kg
VO2P	4.5 (9.5)	3.4 (7.2)	935	520	560	54
VO4P	10.5 (22.3)	9.3 (19.7)	1084	570	700	105

Also available is a range of diesel and hydraulically driven vane compressors.
