

Project name – Leeds Arena

Market sector - Commercial

Geographic sector – West Yorkshire

Project details

GDL have completed the contract to manufacture and supply the Ventilation Grilles and Diffusers at the prestigious Leeds Arena alongside M&E Contractors Rotary Yorkshire Ltd and Main Contractors Bam Construction Ltd.

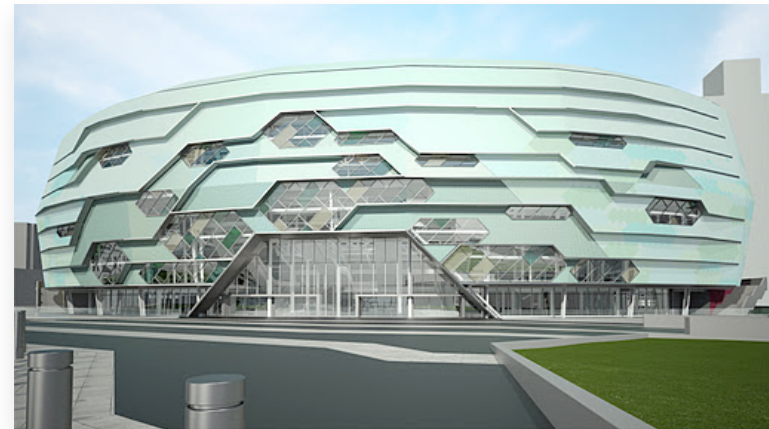

The £60 Million construction began in February 2011 and is due for completion in March 2013, the Arena is set to become the greatest entertainment hub in the city for music and sporting events.

The initial structural works are now complete and the building is both wind and water tight. Construction is now entering the M&E fit-out phase.

Project overview

Our ventilation Grilles and Diffusers were selected as the most suitable product types to ventilate key sections of the Arena. Our product range is manufactured to meet any individual requirements and is suitable for all building types. High quality paint finishes and accessories are also supplied to meet exact requirements.

The Leeds Arena is the first purpose built fan-shape arena design of its kind with a unique layout where all seats face the performance area. This innovative layout provides every spectator with a perfect view of the center stage as the bowl shaped seating area designed by Populous Architects fans outwards from the stage itself.

Architectural Vision for the Completed Project

Benefits of using GDL Products to the project:

- Competitive prices and short lead times.
- Grilles and Diffusers manufactured to suit specific requirements.

GDL products used on this project:

Ceiling Diffusers, Eggcrate Grilles, Circular Face Swirls, Slim-Line Cover Grilles, Linear Bar Grilles, Non Vision Transfer Grilles.
