

Clutch/Over Running Pulleys
now available from stock

Now Available From Stock!

Clutch / Over Running pulleys

Clutch pulleys have become an important part of modern day motoring, as the need for higher fuel efficiency and lower CO2 emissions are being asked from car manufacturers and governing bodies.

The clutch pulley reduces vibration in the belt system with the increase and decrease of engine speed; it also disengages when your vehicle decelerates creating less resistance resulting in more efficiency for the engine.

With over 35 years experience in the Rotating Electrics industry, Universal has the product knowledge and expertise to supply your requirements. We have an extensive range of clutch / overrunning pulleys available from stock, replacing OE manufacturers such as Bosch, Denso, Ina, Litens and Zen. All our clutch pulleys are supplied by market leaders assuring you the best in quality and performance!

Clutch pulleys are also known as;

*Over running pulley.
Freewheeling pulley.
One way pulley.*

Please note that you will need a special tool to remove and install a clutch / over running pulley, we have a selection of these available from stock.
