

## Secure Component Storage & Materials Handling

At our chesterfield facility in the heart of the UK, we have 50,000 sq feet of outdoor storage. This area is for the storage of existing customer components and is also available to store consignments of any materials. The area is monitored by manned CCTV 24 hours a day. It is protected by lazer sensors around the perimeter and is separated from the main road by one manually operated gate and one electrically operated security gate which is opened via intercom.

With 8 overhead cranes capable of lifting up to 15 tonnes, Mollart-Cox is able to maintain safe, non stop materials handling 24 hours a day. We also operate two 5 tonne fork lift trucks which allows continuous loading and un loading of materials.

At Mollart-Cox we are able to offer cutting capacity of any grade material up to 15" dia. We offer sawing as a sub contract facility or to compliment existing customer needs for materials handling. With continuous investment in the latest carbide saw blades, we are able to offer our customers the flexibility of purchasing random length bars and receiving cut to length machined components from a single source sub contract facility.

Please contact Mollart-Cox Engineering for more details.
