## **Encoder manufacturer opens new production facility in the U.K.**

Encoder Technology has set up a manufacturing facility in their new premises in Leatherhead, Surrey. Prior to this, the assembly and test was carried out in Germany with the mechanical components being sub contracted. With Encoder Technology acquiring the precision engineers 'Eplon Engineering' last year, it has allowed them to produce their own critical mechanical components for the encoders. On the assembly side they have made additional investment in high quality assembly and test equipment. The integration of the two aspects of production has meant better quality control and a reduction in delivery times. MD Robert Worrall says " The customer expects fast deliveries and a secure and reliable source of supply, Our new UK based operation meets this requirement. It also allows us continue the expansion of our customised business for OEMs who need specially adapted encoders for their applications. With our own manufactured range plus our distributorships with Tamagawa and TWK we probably have the largest range of encoders in the U.K. "
