

# Streetwise Impact-Flex

## EVOLUTIONARY 'FLEXIBLE' BOLLARDS

- Used primarily in areas where bollards are frequently hit at low speed, reducing impact damage to vehicles and minimising the need for bollard replacement.
- Through pigmented - means that the bollard will never require painting.
- Available in Black, Red or Ochre as standard with other colours available on request.
- Range includes the Manchester flexible bollard.

bollards combine strength and flexibility and are designed to flex during vehicle impact at which

point the bollard will fold through 90 degrees. Once the load is removed the bollard will bounce back to its original upright position. It will continue to fold under a given loading situation an indefinite number of times thanks to the highly durable, resilient polyurethane material called 'Terrathane'.
