Cabinet Heaters

FORCED DRAUGHT GAS AND OIL FIRED CABINET HEATERS

 **AMBIRAD**
ENERGY EFFICIENT HEATING SYSTEMS

Cabinet Heaters

GAS AND OIL FIRED CABINET HEATERS

Introduction

The AmbiRad range of cabinet heaters combines innovative design with a proven four pass heat exchanger technology to provide a high efficiency cost effective and durable range.

The units may be specified for either free blowing applications or for use with ductwork.

Units are manufactured in accordance with ISO 9001 accreditation, all heater efficiencies are compliant with Part L2B of the 2010 Building Regulations with the majority of models also meeting the higher efficiency requirements for Enhanced Capital Allowances.

Options

- High/low or fully modulating burners
- Combustion air adaptors
- Stainless steel tubular heat exchanger
- Air inlet spigots
- Air inlet filters
- Manual or motorised inlet dampers
- Up-rated fan motor for increased static pressure

Applications

- Factories
- Warehouses
- Workshops
- Showrooms
- Greenhouses

Model Range

Cabinet heaters are available as either gas or oil fired models.

- Gas fired cabinet heaters are suitable for use with Natural Gas (G20), most units can also be specified for Propane (G31)
- Oil fired cabinet heaters are suitable for use with Class D gas oil (35 sec), most units can also be specified for Kerosene (28 sec oil)

Vertical freestanding models are available from 29kW to 380kW.

Horizontal and Down flow models from 58kW to 380kW.

ECA

This symbol verifies that the product has been independently assessed and currently qualifies for the ECA scheme, an upfront tax relief enabling businesses that invest in energy-saving equipment to claim 100% first-year capital allowances against their taxable profits.

Specification

Cabinets

Cabinets are constructed from electro-zinc coated steel with an inner heat shield skin and an epoxy powder coat finish outer skin to form a rigid and durable casework.

Air Distribution

Centrifugal fan(s) circulate large air volumes evenly across the full heat exchanger surface for enhanced life expectancy. Fans on models 30 to 85 are direct drive with a single phase motor whilst larger models are fitted with a three phase motor and v-belt drive.

Free blowing heaters are fitted with long throw discharge nozzles complete with horizontal louvres and can be rotated through 360°. Models 75-375 are supplied with a raised rear nozzle (one per three nozzle heater and two per four nozzle heater).

Heaters for use with ductwork are supplied with a duct outlet spigot.

Heat Exchanger and Burner

Four pass combustion chamber/heat exchanger assembly provides improved thermal efficiency with extended life expectancy. A stainless steel chamber is combined with a high efficiency tubular heat exchanger to achieve thermal efficiency in excess of 91%.

The complete assembly is mounted to allow for thermal expansion thereby avoiding undue thermal stress and premature heat exchanger failure.

Gas fired units are fitted with a fully automatic forced draught burner complete with full safety controls to EN676 and the heaters are CE certified. A high/low burner is fitted as standard on model 375.

Oil fired units are supplied complete with a fully automatic burner including safety controls and factory fitted fire valve and oil filter. An additional external fire valve may be required in accordance with BS 5410:Part2:1978.

Controls

A combined fan and limit switch is fitted on all heaters.

In the event of overheating the unit would automatically be shut down by the limit thermostat.

All heaters are supplied with an electronic programmer complete with optimised control, this is factory fitted and wired on free-blowing vertical models. For horizontal, and all duct outlet models down flow heaters the controller is supplied loose for on site wiring by the installer.

Electric Motors

All electric motors comply with EC motor directive 2005/32/EC
