#### **Characteristics**

- medium completely separated from valve parts
- chemical resistance depends on the material of the tube selected
- tube can easily be changed
- no dead areas as in usual valve body
- flow in either direction
- coil can be fixed in any position through 360°
- minimum 1 million cycles (dry, without medium)

#### Series 16.006.230

### Description

The 16.006.230 pinch valve series is normally open in operation and is designed for flexible tubes up to an outer diameter of 9,2 mm and a shore hardness of 50 - 60.

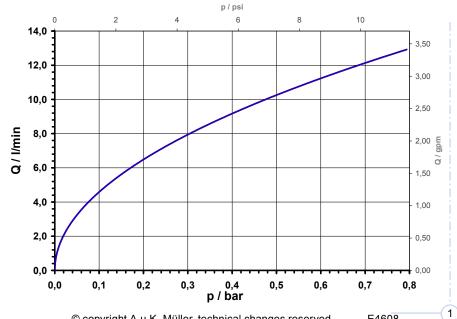

The flow of the medium is controlled by pinching the inserted tube. This design avoids using the traditional valve seat and membrane which can cause turbulence in the fluid flow and create dead areas in the valve housing where medium or dirt can collect. The valve is particularly suitable for applications where a high level of hygiene is required.

The resistance against chemicals depends on the selected material of the tube.

## **Applications**

- dosage systems
- laboratory analysis
- medical equipment
- vending machines

Typical performance curve Silicone tube 6,0x1,0; 60°Sh; length 30cm Medium: Water at 25°C; Free Outlet

Materials					
aluminium (surface refined)					
PA 66, glass fibre reinforced					
aluminium, PTFE					
stainless steel					
PA 6, glass fibre reinforced					

Options						
I.D. Ø	O.D.Ø	Wall Thickness	Shore- Hardness	Clamping- Force / N	Nominal power consumption / W	
6,0	8,0	1,0	60°±5°	9,0	18,5	

Range of possible outer diameter (O.D.Ø) of tube: 6,5 - 9,2 mm. The wall thickness should not deviate from the one given in the upper table. The valve may only be operated with inserted tube.
