

## TRW Automotive Systems

Resolven

### Scope of Project:

#### **Decommissioning of the factory, following closure announcement, 2011**

The project work was all encompassing; Trojan Mek worked closely with site management and engineering department to phase the close down in production and the relocation of working machines to TRW group companies, in the UK, Europe and further afield.

Redundant Machines were sold at auction and were removed, loaded to transport and shipped to purchasers by Trojan Mek.

Trojan Mek also undertook civil engineering projects during the 'making good' process.

Wherever possible, the removal of redundant equipment for scrap was carried out on a zero cost basis.

Project Value £250,000.
