Our 1100 Litre Dockside Marine Spill Kit has everything needed to cope with an emergency spill. It has Marine Booms, drain covers, Oil Selective granules, Oil only rolls, pads, pillows, socks, shovels - in fact practically everything you could need for a dockside spill.

When looking for a spill kit that can be kept on a dockside or heavily trafficked marina, it's not enough to have just a handful of pads and socks in a dustbin that inevitably, gets shoved into a corner and forgotten about. You need a kit that has everything that you could need and fulfills your risk assessment. Many kits on the market today are just too small to deal with dockside spills, which are not only from boats and ships, but can also come from vehicles, forklifts, hydraulic lines, container leakage, accidental drum spillage, and many other areas. This is why we have designed this particular kit to give you the confidence that you have an absorbent available to deal with any type of oil spill.

The Dockside Marine spill kit is contained in three 500 litre containers to enable easy storage and placement which gives you the ability to put these kits in strategic places. By having them in multiple containers you should have 1 kit nearby at all times and be able to move the remaining units quickly and easily to the source of the oil spill.

The containers are lockable and weatherproof and the absorbent contents are evenly distributed across the lockers which are easily moved by pallet truck or forklift.
