

The WEKO logo consists of the word "WEKO" in a white, sans-serif font, centered within a black square. The background of the entire image is a close-up photograph of a large, polished metal roller with a complex mounting bracket and adjustment screws, set against a blue gradient background.

WEKO

**Roller damping system with
optimised functionality and
improved handling.**

WEKO-WFA roller damping system.

The new WEKO-WFA generation.

For retrofitting on your existing roller damping system or as a complete unit.

This enhanced version of the WEKO-WFA was inspired by keen observations in the course of practical use, close contact with users and new technical possibilities. The functionality and handling have been improved, but nothing has changed about its proven method of operation.

Functionality

- two infinitely regulatable and definable dosing areas
- very short reaction time for mixture adjustment thanks to a small recirculated quantity
- powerful supply pump for a maximum pumping height of 12 m

Handling

- time spent on cleaning is reduced considerably by the self-cleaning pan
- all the other components are easily accessible
- anti-wear magnetically connected dosing pump
- cleaning and maintenance tasks can be carried out without tools

This new WEKO-WFA generation is available in two retrofit variants:

Pan set

The exact same reception points in the new pans as those previously supplied make the process of switching easy. A few additional hoses must be routed and connected. After increasing the supply quantity on the flow controllers, the conversion process is complete.

Pan/supply set

consists of:

- supply unit WFD 502 with a mixing tank that is both user and maintenance-friendly.
- maintenance-free, magnetically connected pump replaces the screw pump. The electrical connection is pin-compatible.
