

Jtech Services on Guard Duty

Jtech Services have recently completed the installation of their LST (Low Surface Temperature) Radiator Guards & Pipe Boxing at yet another primary school project.

One of the installers commented that the need for these guards was self-evident because he had found the pipework extremely hot himself, so clearly the youngsters needed protection.

Because of the detailed pre-manufacture measure, installation was quite straightforward and completed well within the half term holiday period, with days to spare for a final clean up before school returned.

The standard style of guard supplied for this project incorporated a high level of design that gives easy access for cleaning and maintenance during their long years of service. And, as always, each guard featured the standard SKS locking mechanism for straightforward, authorised access for maintenance and cleaning.
