 0097 110 Special cleaner refill bottle (1 litre) ①

Ideal for TradeTip 2 Airless nozzles

TipClean has been specially developed for the new generation of WAGNER nozzles. The TradeTip 2 nozzles offer a wide range of uses and are available in different models and sizes. Simple to use and extremely long lasting, they provide perfect coating results.

TradeTip 2

Offers a broad area of use for the application of primers and emulsions right up to airless spraying plasters. First class surfaces.

TradeTip 2 WideFinish

This nozzle with its extra wide spray jet provides a very high surface coverage.

TradeTip 2 FineFinish

Top painting nozzle for particularly high-grade surfaces. Optimal atomisation even at low pressures.

TradeTip 2 LineFinish

The special nozzle for high quality lining and marking work. Sharp edges, so precise lines in border areas.

TipClean - nozzle cleaning

Anywhere at any time – clean the nozzles easily and without touching them. Whether in the workshop, on the building site or in a vehicle – simply put the nozzles into the TipClean container.

The special shape of the container allows **easy cleaning** of the nozzles.

200 ml of ready to use special nozzle cleaning fluid removes contamination and paint residues, so **always provides clean nozzles.**

Ideal for all TradeTip 2 nozzles (see overleaf)

With the practical container your nozzles will also be **safely stored.**

Clean nozzles save money!

Only clean nozzles ensure trouble-free working and the best spraying results. Cleaning immediately after use is best.

TipClean provides simple, effective cleaning. With it you will always have clean nozzles to hand. This lengthens the life of your nozzles and saves money.

This is how easily TipClean works:

- 1. NOZZLES IN**
Open the lid and put up to 6 TradeTip 2 nozzles into the container.

- 2. TURN OVER**
Close and stand it on its head. Let the special cleaner act on the nozzles ...

- 3. SHAKE**
Shaking will loosen the dirt on the nozzles. Next turn the container over again.

- 4. READY!**
The fluid runs down to the bottom. Now you can open the lid, take out the nozzles and remove the loosened dirt with a suitable brush – or store in the container until next used.
