# Lean Philosophy...

...the more effective way to maximise your profits by making to order.

**Lean Powder Handling and Processing means eliminating anything that does not create value for the end product.**

Traditional methods of manufacturing often lead to large scale inventory being created as the manufacturing systems are so inflexible.

Any recipe change means a long shutdown for cleaning giving rise to bottlenecks. Quality issues in any part of the process means a whole campaign could be scrapped.

With a Matcon IBC method of manufacturing, shorter runs can be produced easily as changeovers are quicker and simpler.

The decoupled manufacturing processes give total flexibility and the agility to respond rapidly to changing customers' needs.

### Give us a call

We have a global team of technical sales consultants who offer their services free of charge for an initial site survey. They will identify what financial gains you could make by implementing a Matcon IBC System.

### Key Benefits

- ▶ Produce to order
- ▶ Inventory control
- ▶ Optimised OEE
- ▶ Reduced manufacturing costs
- ▶ Right first time
- ▶ Improved cash flow
- ▶ Increased profits
