Medical Sensors

Can offer a wide range of sensors to suit a wide range of applications that are found in General Industry, Medical and Military arenas.

We have over 40 years experience in making transducers.

Employing foil, semiconductor and ceramic technology providing a remarkable variety of sizes, pressure and load ranges.

Medical Sensor

Semiconductor Strain Gauge

These sensors can be used in an OEM context or can be engineered into completed transducers and transmitters.

Sensors are available at different levels of completion for ease of mounting, fully wired with flying lead or connector. Signal outputs from 1 mV/V to over 75 mV/V can be achieved. A high performance ratio to price is possible.

Temperature coefficients can be customised to specific requirements.

At Acam there is a commitment to quality, 'state of the art' technology and personal service based on over 40 years of experience in sensor and transducer design.
