s95 Care and Maintenance Guidelines

The s95 planter is constructed from powder coated aluminium with a galvanized steel base. These materials have been selected for their excellent outdoor durability as well as their aesthetic properties.

Some care is required to maintain the product's original appearance. The extent to which maintenance is required will depend on a number of factors including environmental conditions, construction activity and level of use.

Maintaining the painted aluminium

The s95 is finished in polyester powder, a plastic coating which is baked onto the components prior to assembly. This is a highly durable finish which will last for many years. To maintain the original appearance of the metalwork it should be cleaned regularly using warm soapy water.

Avoid the use of abrasive cleaners as they may damage the surface finish. Should the paint become chipped or scratched it can be touched up using acrylic based paint.

Where the surface becomes damaged clean with a wire brush or sand, then paint with a spirit or synthetic based top coat. For further advice contact Omos on + 353 45 899802.
