

Research & Development

Our engineers offer research & development services to support both internal and external projects. Our facilities are well suited to the needs of development work, and our on-going product improvement scheme continually uses these facilities to produce new products which complement our existing range of PCBs.

Over the years we have assisted several of our clients with development work for their own products. In these partnerships our clients gain the benefits of our specialist knowledge, and we gain the opportunity to become involved in an ever growing number of applications.

The following is a list of the types of development work we have been involved in at the request of our clients.

- ◆ Specialist Instrumentation Design
- ◆ Application Specific Digital Controller Systems
- ◆ Ultrasonic Driver Electronics Design
- ◆ High Redundancy Power Supply Systems
- ◆ Specialist Annunciation Systems
- ◆ Specialist Interface Electronics
