

Case Study

Project: Sure Start, St Helens
Product/System: Polymer Modified Render System with Protective Coating
Size: 230m²

Problem

This was a new build project where the client wanted a high quality render finish with strong stimulating colours that would provide a maintenance free solution of a minimum period of 15 years.

Solution

Gables carried out sample panels to obtain texture and colour match requirements. Then applied a high performance polymer-modified render system with excellent adhesion to the brickwork. This was over-coated with a compatible 15-year BBA certified weatherproof protective coating, specially manufactured to the client's specified Ral colours. The whole job was completed on time and on budget.
