

Foam Mattresses

Castellated foam mattress

Manufactured with castellated foam that can be used on profiling or standard beds.

Offers a low to medium degree of pressure redistribution.

Two-way stretch waterproof, vapour permeable cover.

Welded covers also available.

All sizes available.

Pressure Care Low-Med Risk

Memory foam mattress

Consists of a top layer of visco elastic foam with an under-layer of supportive foam.

Provides excellent pressure redistribution by moulding to the shape of the body and spreading the weight over a wide surface area.

Two-way stretch waterproof, vapour permeable cover.

Welded cover also available.

All sizes available.

Pressure Care Med-High Risk

Community Vitality High Risk Memory Foam Mattress

An innovative high risk pressure reducing mattress made from the highest quality materials. It is designed to deliver optimum pressure reduction and thereby provide superior comfort and support for those who require special bed care.

Provides excellent pressure redistribution by moulding to the shape of the body and spreading the weight over a wide surface area.

It is designed with firm foam side rails to aid patient transfer and repositioning.

By creating a mould the sliding forces experienced when sitting up in bed are better contained. This reduces friction and shear damage.

Two-way stretch, waterproof, vapour permeable cover.

It can help reduce arthritic and back pain.

All sizes available.
