Figure 1

Part Number:	4077276011	
Frequency Range:	Medium Permeability, 77 (ui=2000) & 78 (ui=2300) materials	
Description:	77 ROD	
Application:	Inductive Components	
Where Used:	Open Magnetic Circuit	
Part Type:	Rods	
Preferred Part:	$\checkmark$	
Mechanical Specifications		

Weight: 3.800 (g)

## Part Type Information

Pressed Fair-Rite rods are used extensively in high-energy storage designs. These rods can also be used for inductive components that require temperature stability or have to accommodate large dc bias requirements.

-The 'A' dimension can be centerless ground to tighter tolerances.

-Figure 2 rods have a 0.6 mm (.024") maximum chamfer on the end faces.

-For frequency tuned designs see separate section rods for antenna and RFID applications.

-For any rod requirement not listed here, feel free to contact our customer service group for availability and pricing.

Legend

+ Test frequency

Preferred parts, the suggested choice for new designs, have shorter lead times and are more readily available.

The column H(Oe) gives for each bead the calculated dc bias field in oersted for 1 turn and 1 ampere direct current. The actual dc H field in the application is this value of H times the actual NI (ampere-turn) product. For the effect of the dc bias on the impedance of the bead material, see figures 18-23 in the application note How to choose Ferrite Components for EMI Suppression.

A ½ turn is defined as a single pass through a hole.

LI/A - Core Constant

A<sub>e</sub>: Effective Cross-Sectional Area

 $A_{I}$  - Inductance Factor  $\left(\frac{L}{N^{2}}\right)$ 

N/AWG - Number of Turns/Wire Size for Test Coil

I e: Effective Path Length

V<sub>e</sub>: Effective Core Volume

NI - Value of dc Ampere-turns

Fair-Rite Products Corp. PO Box J,One Commercial Row, Wallkill, NY 12589-0288 Phone: (888) 324-7748 www.fair-rite.com Fair-Rite Product's Catalog Part Data Sheet, 4077276011 Printed: 2008-06-11

# **Ferrite Material Constants**

Specific Heat	0.25 cal/g/ºC
Thermal Conductivity	10x10 <sup>-3</sup> cal/sec/cm/°C
Coefficient of Linear Expansion	8 - 10x10 <sup>-6</sup> /°C
Tensile Strength	4.9 kgf/mm <sup>2</sup>
Compressive Strength	42 kgf/mm <sup>2</sup>
Young's Modulus	15x10 <sup>3</sup> kgf/mm <sup>2</sup>
Hardness (Knoop)	650
Specific Gravity	$\approx$ 4.7 g/cm <sup>3</sup>
The above quoted properties are typical for Fair-Rit	e MnZn and NiZn ferrites.

See next page for further material specifications.

Fair-Rite Products Corp. PO Box J,One Commercial Row, Wallkill, NY 12589-0288 Phone: (888) 324-7748 www.fair-rite.com

A MnZn ferrite for use in a wide range of high and low flux density inductive designs for frequencies up to 100 kHz.

Pot cores, E&I cores, U cores, rods, toroids, and bobbins are all available in 77 material.
