

## Tippers

Every Priden tipper is designed and manufactured to each customer's own requirements based around 50 years experience within the industry. Steel or full alloy construction is available.

Our own special CAD designed full alloy body is constructed from high grade alloy which is 3 times the strength of standard transport grade material. Available to suit all chassis cabs the heavy duty design can outlast a steel tipper by up to 6 years.

The special design features can increase your payload by up to 250kg over a steel tipper body.

Only high quality materials are used in the construction of our tippers. The unique door design is the result of years of experience in the field. All usual extras come as standard on our tippers for example hardwood rail on the ladder gantry, ladder and broom rack and stainless steel locking bar.

Priden Engineering Ltd pride ourselves on quality and offer a two year manufacturer's warranty on our commercial vehicle bodies. Supplier's warranty applies on the tipping gear.
