

Energy efficient

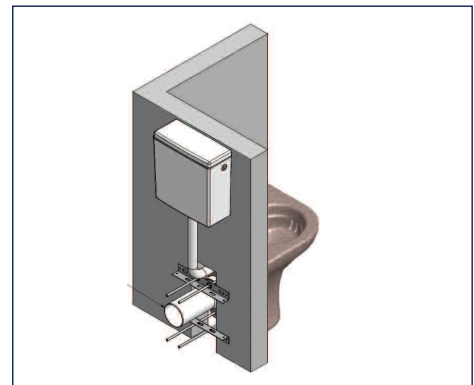

Water Controls & WC Flushing

Water Controls

Wallgate supplies a comprehensive range of electronic, pneumatic and mechanical water activation and control methods, all of which are compatible with its range of solid surface sanitaryware.

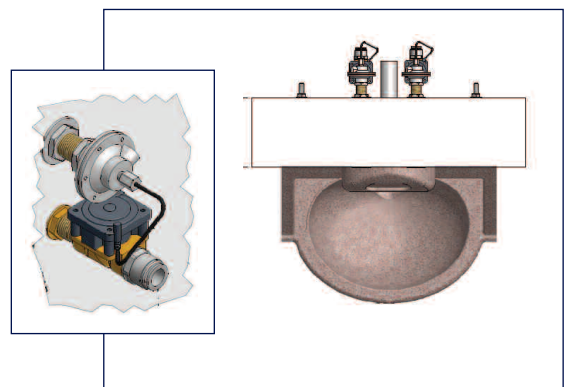

Electronic Controls

Our range of fully programmable electronic controls provide for the total control of all the water services, including lock outs, timed flow, dual flush, remote flushing etc, as well as controlling the power to the cell lighting and sockets if required.

Pneumatic Controls

All of Wallgate's range of WC Pans, Basins, Baths and Showers are compatible with pneumatic operation. Controlling a single device per unit and offering a timed flow, they eliminate the need for an electrical power supply to be installed.

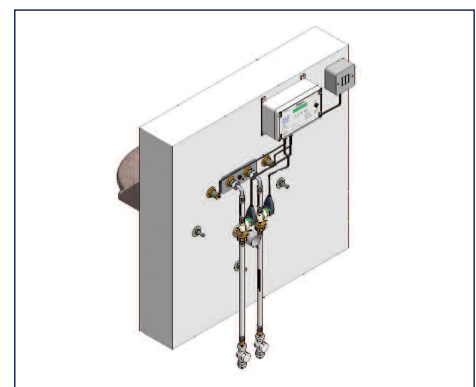

WC Flushing

Wallgate's range of WCs have been independently tested to and passed the WRAS flush performance specification (formal test and approval application pending) and are compatible with a wide range of activation methods, all of which can be supplied as part of its sanitaryware package.

These include:

- Cisterns,
- Compact cisterns,
- Pipe cisterns,
- Direct flush,
- Grey water header tank and mechanical flushing.
