

Project Review

Global Biopharmaceutical Company, USA

Background

Puracore's fire rated panel range was chosen by leading engineering company and cleanroom specialist, FH Chase as the preferred product for a firewall application in a cleanroom environment. The customer is a successful global Biopharmaceutical company based in the USA. The company pioneers in the discovery and development of innovative medicines that help prevent and cure serious diseases.

Requirement

Due to modifications on the site, the customer was left with an opening that needed to be fire-rated, finished with uPVC and delivered fast.

Solution

Manufacturing mineral fibre core panels with the required design shape and white cleanable polyester finish to fit into its environment and offer an aesthetically pleasing result. We used careful packaging and reliable international shipping method to deliver the product on time to site with the correct approvals and ratings.

Feedback

'The company is very happy with the product. Overall it's been a very good experience for us. I'll definitely rate your performance 9 out of 10. We are already planning a second project with you.'

Eddie Walsh, FH Chase
