AIR CONDITIONING

Air conditioning service that's degrees better °

## Air conditioning service that's degrees better°

What makes our services degrees° better?

It's refreshingly quick and easy to get hold of us, there's even over 14 ways to contact us.

We're always contactable 24/7 and available to fit in with your operations.

Our survey, design and quotation service is always free, the more you use it the happier we are.

Not only does being Nottingham based guarantee we'll be onsite fast when you call us, it also means because we're not travelling far everything we do is affordable.

We're engineers, not generic salespeople, we install, repair or service your system based on your needs not off the shelf one size fits all packages. You only pay for what you need, saving you money.

We've every air conditioning service you'll need for every brand you'll want or come across.

We want you to be a life long customer so your service experience is as important to us as our onsite engineering work, you'll always know what we're doing, why, when, how long it'll take and what the cost is.

**Service**

**Every air conditioning service  
you'll ever need.**

Modern air conditioning systems have a longer lifespan than ever before so we know your organisation and its equipment will need different support over the years.

That's why we have every type of air conditioning service you'll ever need, whether its servicing, moving, cleaning, removing, reinstalling, repairing or supplying and installing new systems.

**Every air conditioning brand  
you'll ever need help with.**

Over the last two decades as organisations realised the benefits of using air conditioning hundreds of thousands of systems were installed in the UK, so its now commonplace for a building to have several different makes installed by as many contractors.

We're a fully independent company with access to new systems and UK based spares for every air conditioning manufacturer, so we can service and support any make and model of system you've got, regardless of when and who installed it.

## **Air Conditioning designed by us will cost you less.**

An incorrectly sized or badly installed system will cost you significantly more to run, be continuously breaking down and be a constant source of headache and frustration when it won't cool or heat correctly.

Choose us as your air conditioning supplier and this won't happen to you because we're an air conditioning engineering company that designs systems and services to your requirements and budget, not generic sales people with only off the shelf, one-size-fit-all systems to suit them.

**Long equipment warranties  
guarantee peace of mind for years.**

Choosing the right air conditioning system isn't the only way to guarantee your air conditioning system will give years of reliable service. How the system is installed, commissioned and the quality of the materials used are equally as important.

All our engineers have recognised industry qualifications with extra training from the equipment manufacturers and our work and materials are always to BS:EN378 standard, which is why we're confident to offer up to a 5 year warranty on our work.

## **There's no benefit when air conditioning's not running.**

When you've invested in air conditioning we understand the frustration and pressure when it's off-line, production and sales drop as quickly as the temperature rises.

We know you need a quick response from your air conditioning contractor. We've guaranteed our response times are excellent by only employing local engineers and surveyors, 88% of the time last year we responded to customer's calls within 3 hours.

## **We'll make your air conditioning run cheaper.**

A dirty or incorrectly serviced air conditioning system has to work harder and for longer to achieve temperature increasing wear and tear on the system. Filter blockages, shortage of refrigerant and dirty evaporator and condenser coils are common culprits.

Our engineers have the very latest training and equipment to quickly get your system operating efficiently, which means at the lowest possible running cost, all from as little as £20 per system.

**CHANGES  
AHEAD ↑**

**Be ahead and in control of air conditioning developments that affect you.**

Like your industry, the air conditioning industry is constantly evolving, changes in legislation, technology and even public opinion are impacting on how air conditioning is used.

We know you want the best benefit from your air conditioning for the minimum cost, but even more importantly, that you want to know about upcoming problems before they hit you blindly because you weren't forewarned. As you read this the ban on using R22 refrigerant, F-GAS changes or the Energy Performance Building Directive could mean you'll shortly be facing unexpected and unbudgeted costs.

As a customer of Nottingham Air Conditioning we won't just keep you up to date with developments, we'll keep you ahead of them, so you're in control.

Thinking of Calling us about your Air Conditioning?  
What ever you do. Whatever stage you're at. Whatever service you need.  
We guarantee to get you the best out of your investment in air conditioning.
